Meeting ID: 714 366 5630

Spectral symmetry of solutions of boundary value problems in Banach algebras

Abstract

For complex Banach algebras \mathcal{A} and solutions $u : [0, 1] \rightarrow \mathcal{A}$ of $u''(t) + f(u(t)) + \lambda u'(t)^2 = 0$, $u(0) = 0$, $u(1) = 0$, we outline a proof for that $\sigma(u(t)) = \sigma(u(1-t))$ on $[0, 1]$ in case that $\sigma(u([0, 1]))$ lies in a cone of the complex plane. This result is in the tradition of symmetry results on scalar nonnegative solutions of Dirichlet boundary value problems for second order ordinary and partial differential equations.
