

Module Handbook Techno-Mathematics Master 2016 (Master of Science (M.Sc.))

SPO 2016

Summer term 2023

Date: 20/04/2023

KIT DEPARTMENT OF MATHEMATICS

Table Of Contents

1. Field of study structure	11
1.1. Master's Thesis	11
1.2. Internship	11
1.3. Applied Mathematics	12
1.4. Electrical Engineering / Information Technology	17
1.5. Experimental Physics	17
1.6. Chemical and Process Engineering	18
1.7. Wildcard Technical Field	18
1.8. Computer Science	18
1.9. Mathematical Specialization	19
1.10. Interdisciplinary Qualifications	23
1.11. Additional Examinations	24
2. Modules	29
2.1. Adaptive Finite Element Methods - M-MATH-102900	29
2.2. Advanced Inverse Problems: Nonlinearity and Banach Spaces - M-MATH-102955	30
2.3. Algebra - M-MATH-101315	31
2.4. Algebraic Geometry - M-MATH-101724	32
2.5. Algebraic Number Theory - M-MATH-101725	33
2.6. Algebraic Topology - M-MATH-102948	34
2.7. Algebraic Topology II - M-MATH-102953	35
2.8. An Introduction to Periodic Elliptic Operators - M-MATH-105096	36
2.9. Analytic and Algebraic Aspects of Group Rings - M-MATH-106305	37
2.10. Analytical and Numerical Homogenization - M-MATH-105636	38
2.11. Applications of Topological Data Analysis - M-MATH-105651	39
2.12. Aspects of Geometric Analysis - M-MATH-103251	40
2.13. Aspects of Time Integration - M-MATH-102934	41
2.14. Astroparticle Physics I - M-PHYS-102075	42
2.15. Banach Algebras - M-MATH-102913	43
2.16. Basics of Nanotechnology I - M-PHYS-102097	44
2.17. Basics of Nanotechnology II - M-PHYS-102100	45
2.18. Batteries and Fuel Cells - M-ETIT-100532	46
2.19. Bayesian Inverse Problems with Connections to Machine Learning - M-MATH-106328	47
2.20. Bifurcation Theory - M-MATH-103259	48
2.21. Biopharmaceutical Purification Processes - M-CIWVT-103065	49
2.22. Bott Periodicity - M-MATH-104349	50
2.23. Boundary and Eigenvalue Problems - M-MATH-102871	51
2.24. Boundary Element Methods - M-MATH-103540	52
2.25. Boundary value problems for nonlinear differential equations - M-MATH-102876	53
2.26. Brownian Motion - M-MATH-102904	54
2.27. Classical Methods for Partial Differential Equations - M-MATH-102870	55
2.28. Cognitive Systems - M-INFO-100819	56
2.29. Combinatorics - M-MATH-102950	57
2.30. Combustion Technology - M-CIWVT-103069	58
2.31. Commutative Algebra - M-MATH-104053	59
2.32. Comparison Geometry - M-MATH-102940	60
2.33. Comparison of Numerical Integrators for Nonlinear Dispersive Equations - M-MATH-104426	61
2.34. Complex Analysis - M-MATH-102878	62
2.35. Compressive Sensing - M-MATH-102935	63
2.36. Computational Fluid Dynamics - M-CIWVT-103072	64
2.37. Computational Group Theory - M-MATH-106240	65
2.38. Computer Architecture - M-INFO-100818	67
2.39. Computer Graphics - M-INFO-100856	68
2.40. Computer-Assisted Analytical Methods for Boundary and Eigenvalue Problems - M-MATH-102883	69
2.41. Condensed Matter Theory I, Fundamentals - M-PHYS-102054	70
2.42. Condensed Matter Theory I, Fundamentals and Advanced Topics - M-PHYS-102053	71
2.43. Condensed Matter Theory II: Many-Body Theory, Fundamentals - M-PHYS-102313	72
2.44. Condensed Matter Theory II: Many-Body Theory, Fundamentals and Advanced Topics - M-PHYS-102308	74

2.45. Continuous Time Finance - M-MATH-102860	76
2.46. Control Theory - M-MATH-102941	77
2.47. Convex Geometry - M-MATH-102864	78
2.48. Deep Learning and Neural Networks - M-INFO-104460	79
2.49. Differential Geometry - M-MATH-101317	80
2.50. Discrete Dynamical Systems - M-MATH-105432	81
2.51. Discrete Time Finance - M-MATH-102919	82
2.52. Dispersive Equations - M-MATH-104425	83
2.53. Dynamical Systems - M-MATH-103080	84
2.54. Electromagnetics and Numerical Calculation of Fields - M-ETIT-100386	85
2.55. Electronic Properties of Solids I, with Exercises - M-PHYS-102089	87
2.56. Electronic Properties of Solids I, without Exercises - M-PHYS-102090	88
2.57. Electronic Properties of Solids II, with Exercises - M-PHYS-102108	89
2.58. Electronic Properties of Solids II, without Exercises - M-PHYS-102109	90
2.59. Evolution Equations - M-MATH-102872	91
2.60. Exponential Integrators - M-MATH-103700	92
2.61. Extremal Graph Theory - M-MATH-102957	93
2.62. Extreme Value Theory - M-MATH-102939	94
2.63. Finite Element Methods - M-MATH-102891	95
2.64. Forecasting: Theory and Practice - M-MATH-102956	96
2.65. Formal Systems - M-INFO-100799	97
2.66. Foundations of Continuum Mechanics - M-MATH-103527	98
2.67. Fourier Analysis and its Applications to PDEs - M-MATH-104827	99
2.68. Fractal Geometry - M-MATH-105649	100
2.69. Functional Analysis - M-MATH-101320	101
2.70. Functions of Matrices - M-MATH-102937	102
2.71. Functions of Operators - M-MATH-102936	103
2.72. Fuzzy Sets - M-INFO-100839	104
2.73. Generalized Regression Models - M-MATH-102906	105
2.74. Geometric Analysis - M-MATH-102923	106
2.75. Geometric Group Theory - M-MATH-102867	107
2.76. Geometric Group Theory II - M-MATH-102869	108
2.77. Geometric Numerical Integration - M-MATH-102921	109
2.78. Geometry of Schemes - M-MATH-102866	110
2.79. Global Differential Geometry - M-MATH-102912	111
2.80. Graph Theory - M-MATH-101336	112
2.81. Group Actions in Riemannian Geometry - M-MATH-102954	113
2.82. Harmonic Analysis - M-MATH-105324	114
2.83. Harmonic Analysis for Dispersive Equations - M-MATH-103545	115
2.84. Harmonic Analysis on Fractals - M-MATH-106287	116
2.85. Heat Transfer II - M-CIWT-103051	117
2.86. High Temperature Process Engineering - M-CIWT-103075	118
2.87. Homotopy Theory - M-MATH-102959	119
2.88. Infinite dimensional dynamical systems - M-MATH-103544	120
2.89. Information Security - M-INFO-106015	121
2.90. Integral Equations - M-MATH-102874	122
2.91. Internet Seminar for Evolution Equations - M-MATH-102918	123
2.92. Internship - M-MATH-102861	124
2.93. Introduction into Particulate Flows - M-MATH-102943	125
2.94. Introduction to Aperiodic Order - M-MATH-105331	126
2.95. Introduction to Artificial Intelligence - M-INFO-106014	127
2.96. Introduction to Convex Integration - M-MATH-105964	128
2.97. Introduction to Cosmology - M-PHYS-102175	129
2.98. Introduction to Fluid Dynamics - M-MATH-105650	130
2.99. Introduction to Fluid Mechanics - M-MATH-106401	131
2.100. Introduction to Geometric Measure Theory - M-MATH-102949	132
2.101. Introduction to Homogeneous Dynamics - M-MATH-105101	133
2.102. Introduction to Kinetic Equations - M-MATH-105837	134
2.103. Introduction to Kinetic Theory - M-MATH-103919	135
2.104. Introduction to Matlab and Numerical Algorithms - M-MATH-102945	136

2.105. Introduction to Microlocal Analysis - M-MATH-105838	137
2.106. Introduction to Scientific Computing - M-MATH-102889	138
2.107. Introduction to Stochastic Differential Equations - M-MATH-106045	139
2.108. Inverse Problems - M-MATH-102890	140
2.109. Key Competences - M-MATH-102994	141
2.110. Key Moments in Geometry - M-MATH-104057	142
2.111. L2-Invariants - M-MATH-102952	143
2.112. Lie Groups and Lie Algebras - M-MATH-104261	144
2.113. Lie-Algebras (Linear Algebra 3) - M-MATH-105839	145
2.114. Localization of Mobile Agents - M-INFO-100840	146
2.115. Markov Decision Processes - M-MATH-102907	147
2.116. Master's Thesis - M-MATH-102917	148
2.117. Mathematical Methods in Signal and Image Processing - M-MATH-102897	149
2.118. Mathematical Methods of Imaging - M-MATH-103260	150
2.119. Mathematical Modelling and Simulation in Practise - M-MATH-102929	151
2.120. Mathematical Statistics - M-MATH-102909	152
2.121. Mathematical Topics in Kinetic Theory - M-MATH-104059	153
2.122. Maxwell's Equations - M-MATH-102885	154
2.123. Medical Imaging - M-MATH-102896	155
2.124. Medical Imaging Techniques I - M-ETIT-100384	156
2.125. Medical Imaging Techniques II - M-ETIT-100385	157
2.126. Methods of Signal Processing - M-ETIT-100540	158
2.127. Metric Geometry - M-MATH-105931	159
2.128. Models of Mathematical Physics - M-MATH-102875	160
2.129. Modern Experimental Physics I, Atoms, Nuclei and Molecules - M-PHYS-106331	161
2.130. Modular Forms - M-MATH-102868	162
2.131. Monotonicity Methods in Analysis - M-MATH-102887	163
2.132. Multigrid and Domain Decomposition Methods - M-MATH-102898	164
2.133. Neural Networks - M-INFO-100846	165
2.134. Nonlinear Analysis - M-MATH-103539	166
2.135. Nonlinear Control Systems - M-ETIT-100371	167
2.136. Nonlinear Evolution Equations - M-MATH-102877	168
2.137. Nonlinear Functional Analysis - M-MATH-102886	169
2.138. Nonlinear Maxwell Equations - M-MATH-105066	170
2.139. Nonlinear Maxwell Equations - M-MATH-103257	171
2.140. Nonlinear Wave Equations - M-MATH-105326	172
2.141. Nonparametric Statistics - M-MATH-102910	173
2.142. Numerical Analysis of Helmholtz Problems - M-MATH-105764	174
2.143. Numerical Complex Analysis - M-MATH-106063	175
2.144. Numerical Continuation Methods - M-MATH-102944	176
2.145. Numerical Linear Algebra for Scientific High Performance Computing - M-MATH-103709	177
2.146. Numerical Linear Algebra in Image Processing - M-MATH-104058	178
2.147. Numerical Methods for Differential Equations - M-MATH-102888	179
2.148. Numerical Methods for Hyperbolic Equations - M-MATH-102915	180
2.149. Numerical Methods for Integral Equations - M-MATH-102930	181
2.150. Numerical Methods for Maxwell's Equations - M-MATH-102931	182
2.151. Numerical Methods for Time-Dependent Partial Differential Equations - M-MATH-102928	183
2.152. Numerical Methods in Computational Electrodynamics - M-MATH-102894	184
2.153. Numerical Methods in Fluid Mechanics - M-MATH-102932	185
2.154. Numerical Methods in Mathematical Finance - M-MATH-102901	186
2.155. Numerical Methods in Mathematical Finance II - M-MATH-102914	187
2.156. Numerical Optimisation Methods - M-MATH-102892	188
2.157. Numerical Simulation in Molecular Dynamics - M-MATH-105327	189
2.158. Optical Waveguides and Fibers - M-ETIT-100506	190
2.159. Optimal Control and Estimation - M-ETIT-102310	192
2.160. Optimisation and Optimal Control for Differential Equations - M-MATH-102899	193
2.161. Optimization in Banach Spaces - M-MATH-102924	194
2.162. Optimization of Dynamic Systems - M-ETIT-100531	195
2.163. Parallel Computing - M-MATH-101338	196
2.164. Particle Physics I - M-PHYS-102114	197

2.165. Pattern Recognition - M-INFO-100825	199
2.166. Percolation - M-MATH-102905	200
2.167. Physical Foundations of Cryogenics - M-CIWVT-103068	201
2.168. Poisson Processes - M-MATH-102922	202
2.169. Potential Theory - M-MATH-102879	203
2.170. Probability Theory and Combinatorial Optimization - M-MATH-102947	204
2.171. Process Modeling in Downstream Processing - M-CIWVT-103066	205
2.172. Processing of Nanostructured Particles - M-CIWVT-103073	206
2.173. Project Centered Software-Lab - M-MATH-102938	207
2.174. Random Graphs - M-MATH-102951	208
2.175. Random Graphs and Networks - M-MATH-106052	209
2.176. Real-Time Systems - M-INFO-100803	210
2.177. Robotics I - Introduction to Robotics - M-INFO-100893	211
2.178. Robotics III - Sensors and Perception in Robotics - M-INFO-104897	212
2.179. Ruin Theory - M-MATH-104055	213
2.180. Scattering Theory - M-MATH-102884	214
2.181. Security - M-INFO-100834	215
2.182. Selected Methods in Fluids and Kinetic Equations - M-MATH-105897	216
2.183. Selected Topics in Harmonic Analysis - M-MATH-104435	217
2.184. Seminar - M-MATH-102730	218
2.185. Seminar Advanced Topics in Parallel Programming - M-INFO-101887	219
2.186. Sobolev Spaces - M-MATH-102926	220
2.187. Software Engineering II - M-INFO-100833	221
2.188. Space and Time Discretization of Nonlinear Wave Equations - M-MATH-105966	222
2.189. Spatial Stochastics - M-MATH-102903	223
2.190. Special Topics of Numerical Linear Algebra - M-MATH-102920	224
2.191. Spectral Theory - M-MATH-101768	225
2.192. Spectral Theory of Differential Operators - M-MATH-102880	226
2.193. Spin Manifolds, Alpha Invariant and Positive Scalar Curvature - M-MATH-102958	227
2.194. Splitting Methods - M-MATH-102933	228
2.195. Splitting Methods for Evolution Equations - M-MATH-105325	229
2.196. Statistical Learning - M-MATH-105840	230
2.197. Statistical Thermodynamics - M-CIWVT-103059	231
2.198. Steins Method with Applications in Statistics - M-MATH-105579	232
2.199. Stochastic Control - M-MATH-102908	233
2.200. Stochastic Differential Equations - M-MATH-102881	234
2.201. Stochastic Geometry - M-MATH-102865	235
2.202. Stochastic Information Processing - M-INFO-100829	236
2.203. Stochastic Simulation - M-MATH-106053	237
2.204. Structural Graph Theory - M-MATH-105463	238
2.205. Supplementary Studies on Culture and Society - M-ZAK-106235	239
2.206. Supplementary Studies on Sustainable Development - M-ZAK-106099	242
2.207. Technical Optics - M-ETIT-100538	245
2.208. Technomathematical Seminar - M-MATH-102863	246
2.209. Telematics - M-INFO-100801	247
2.210. Theoretical Nanooptics - M-PHYS-102295	248
2.211. Theoretical Optics - M-PHYS-102277	249
2.212. Thermodynamics III - M-CIWVT-103058	250
2.213. Thermodynamics of Interfaces - M-CIWVT-103063	251
2.214. Time Series Analysis - M-MATH-102911	252
2.215. Topological Data Analysis - M-MATH-105487	253
2.216. Topological Genomics - M-MATH-106064	254
2.217. Topological Groups - M-MATH-105323	255
2.218. Translation Surfaces - M-MATH-105973	256
2.219. Traveling Waves - M-MATH-102927	257
2.220. Uncertainty Quantification - M-MATH-104054	259
2.221. Unit Operations and Process Chains for Food of Animal Origin - M-CIWVT-104421	260
2.222. Unit Operations and Process Chains for Food of Plant Origin - M-CIWVT-104420	261
2.223. Variational Methods - M-MATH-105093	262
2.224. Wave Propagation in Periodic Waveguides - M-MATH-105462	263

2.225. Wavelets - M-MATH-102895	264
3. Courses.....	265
3.1. Adaptive Finite Element Methods - T-MATH-105898	265
3.2. Advanced Inverse Problems: Nonlinearity and Banach Spaces - T-MATH-105927	266
3.3. Algebra - T-MATH-102253	267
3.4. Algebraic Geometry - T-MATH-103340	268
3.5. Algebraic Number Theory - T-MATH-103346	269
3.6. Algebraic Topology - T-MATH-105915	270
3.7. Algebraic Topology II - T-MATH-105926	271
3.8. An Introduction to Periodic Elliptic Operators - T-MATH-110306	272
3.9. Analytic and Algebraic Aspects of Group Rings - T-MATH-112777	273
3.10. Analytical and Numerical Homogenization - T-MATH-111272	274
3.11. Applications of Topological Data Analysis - T-MATH-111290	275
3.12. Aspects of Geometric Analysis - T-MATH-106461	276
3.13. Aspects of Time Integration - T-MATH-105904	277
3.14. Astroparticle Physics I - T-PHYS-102432	278
3.15. Banach Algebras - T-MATH-105886	279
3.16. Basics Module - Self Assignment BAK - T-ZAK-112653	280
3.17. Basics Module - Self Assignment BeNe - T-ZAK-112345	281
3.18. Basics of Nanotechnology I - T-PHYS-102529	282
3.19. Basics of Nanotechnology II - T-PHYS-102531	283
3.20. Batteries and Fuel Cells - T-ETIT-100983	284
3.21. Bayesian Inverse Problems with Connections to Machine Learning - T-MATH-112842	285
3.22. Bifurcation Theory - T-MATH-106487	286
3.23. Biopharmaceutical Purification Processes - T-CIWVT-106029	287
3.24. Bott Periodicity - T-MATH-108905	288
3.25. Boundary and Eigenvalue Problems - T-MATH-105833	289
3.26. Boundary Element Methods - T-MATH-109851	290
3.27. Boundary Value Problems for Nonlinear Differential Equations - T-MATH-105847	291
3.28. Brownian Motion - T-MATH-105868	292
3.29. Classical Methods for Partial Differential Equations - T-MATH-105832	293
3.30. Cognitive Systems - T-INFO-101356	294
3.31. Combinatorics - T-MATH-105916	295
3.32. Combustion Technology - T-CIWVT-106104	296
3.33. Commutative Algebra - T-MATH-108398	297
3.34. Comparison Geometry - T-MATH-105917	298
3.35. Comparison of Numerical Integrators for Nonlinear Dispersive Equations - T-MATH-109040	299
3.36. Complex Analysis - T-MATH-105849	300
3.37. Compressive Sensing - T-MATH-105894	301
3.38. Computational Fluid Dynamics - T-CIWVT-106035	302
3.39. Computational Group Theory exam - T-MATH-112669	303
3.40. Computational Group Theory Tutorial - T-MATH-112670	304
3.41. Computer Architecture - T-INFO-101355	305
3.42. Computer Graphics - T-INFO-101393	306
3.43. Computer Graphics Pass - T-INFO-104313	307
3.44. Computer-Assisted Analytical Methods for Boundary and Eigenvalue Problems - T-MATH-105854	308
3.45. Condensed Matter Theory I, Fundamentals - T-PHYS-102559	309
3.46. Condensed Matter Theory I, Fundamentals and Advanced Topics - T-PHYS-102558	310
3.47. Condensed Matter Theory II: Many-Body Systems, Fundamentals - T-PHYS-104591	311
3.48. Condensed Matter Theory II: Many-Body Systems, Fundamentals and Advanced Topics - T-PHYS-102560	312
3.49. Continuous Time Finance - T-MATH-105930	313
3.50. Control Theory - T-MATH-105909	314
3.51. Convex Geometry - T-MATH-105831	315
3.52. Deep Learning and Neural Networks - T-INFO-109124	316
3.53. Differential Geometry - T-MATH-102275	317
3.54. Discrete Dynamical Systems - T-MATH-110952	318
3.55. Discrete Time Finance - T-MATH-105839	319
3.56. Dispersive Equations - T-MATH-109001	320
3.57. Dynamical Systems - T-MATH-106114	321

3.58. Elective Module - Subject, Body, Individual: the Other Side of Sustainability - Self Assignment BeNe - T-ZAK-112349	322
3.59. Elective Module - Sustainability Assessment of Technology - Self Assignment BeNe - T-ZAK-112348	323
3.60. Elective Module - Sustainability in Culture, Economy and Society - Self Assignment BeNe - T-ZAK-112350	324
3.61. Elective Module - Sustainable Cities and Neighbourhoods - Self Assignment BeNe - T-ZAK-112347	325
3.62. Electromagnetics and Numerical Calculation of Fields - T-ETIT-100640	326
3.63. Electronic Properties of Solids I, with Exercises - T-PHYS-102577	327
3.64. Electronic Properties of Solids I, without Exercises - T-PHYS-102578	328

1 Field of study structure

Mandatory	
Master's Thesis	30 CR
Internship <i>This field will not influence the calculated grade of its parent.</i>	10 CR
Applied Mathematics	24 CR
Technical Field (Election: 1 item)	
Electrical Engineering / Information Technology	18-27 CR
Experimental Physics	18-27 CR
Chemical and Process Engineering	18-27 CR
Wildcard Technical Field	18-27 CR
Mandatory	
Computer Science	8-17 CR
Mathematical Specialization	19 CR
Interdisciplinary Qualifications <i>This field will not influence the calculated grade of its parent.</i>	2 CR
Voluntary	
Additional Examinations <i>This field will not influence the calculated grade of its parent.</i>	

1.1 Master's Thesis

1.4 Electrical Engineering / Information Technology

Credits
18-27

Mandatory		
M-MATH-102863	Technomathematical Seminar	3 CR
Electrical Engineering / Information Technology (Election: between 15 and 24 credits)		
M-ETIT-102310	Optimal Control and Estimation	3 CR
M-ETIT-100371	Nonlinear Control Systems	3 CR
M-ETIT-100384	Medical Imaging Techniques I	3 CR
M-ETIT-100385	Medical Imaging Techniques II	3 CR
M-ETIT-100386	Electromagnetics and Numerical Calculation of Fields	4 CR
M-ETIT-100506	Optical Waveguides and Fibers	4 CR
M-ETIT-100531	Optimization of Dynamic Systems	5 CR
M-ETIT-100532	Batteries and Fuel Cells	5 CR
M-ETIT-100538	Technical Optics	5 CR
M-ETIT-100540	Methods of Signal Processing	6 CR

1.5 Experimental Physics

Credits
18-27

Mandatory		
M-MATH-102863	Technomathematical Seminar	3 CR
Experimental Physics (Election: between 15 and 24 credits)		
M-PHYS-106331	Modern Experimental Physics I, Atoms, Nuclei and Molecules neu	8 CR
M-PHYS-102053	Condensed Matter Theory I, Fundamentals and Advanced Topics	12 CR
M-PHYS-102054	Condensed Matter Theory I, Fundamentals	8 CR
M-PHYS-102075	Astroparticle Physics I	8 CR
M-PHYS-102089	Electronic Properties of Solids I, with Exercises	10 CR
M-PHYS-102090	Electronic Properties of Solids I, without Exercises	8 CR
M-PHYS-102097	Basics of Nanotechnology I	4 CR
M-PHYS-102100	Basics of Nanotechnology II	4 CR
M-PHYS-102108	Electronic Properties of Solids II, with Exercises	8 CR
M-PHYS-102109	Electronic Properties of Solids II, without Exercises	4 CR
M-PHYS-102114	Particle Physics I	8 CR
M-PHYS-102175	Introduction to Cosmology	6 CR
M-PHYS-102277	Theoretical Optics	6 CR
M-PHYS-102295	Theoretical Nanooptics	6 CR
M-PHYS-102308	Condensed Matter Theory II: Many-Body Theory, Fundamentals and Advanced Topics	12 CR
M-PHYS-102313	Condensed Matter Theory II: Many-Body Theory, Fundamentals	8 CR

1.6 Chemical and Process Engineering

Credits
18-27

Mandatory		
M-MATH-102863	Technomathematical Seminar	3 CR
Chemical and Process Engineering (Election: between 15 and 24 credits)		
M-CIWVT-103051	Heat Transfer II	4 CR
M-CIWVT-103058	Thermodynamics III	6 CR
M-CIWVT-103059	Statistical Thermodynamics	6 CR
M-CIWVT-103063	Thermodynamics of Interfaces	4 CR
M-CIWVT-103065	Biopharmaceutical Purification Processes	6 CR
M-CIWVT-103066	Process Modeling in Downstream Processing	4 CR
M-CIWVT-103068	Physical Foundations of Cryogenics	6 CR
M-CIWVT-103069	Combustion Technology	6 CR
M-CIWVT-103072	Computational Fluid Dynamics	6 CR
M-CIWVT-103073	Processing of Nanostructured Particles	6 CR
M-CIWVT-103075	High Temperature Process Engineering	6 CR
M-CIWVT-104420	Unit Operations and Process Chains for Food of Plant Origin	7 CR
M-CIWVT-104421	Unit Operations and Process Chains for Food of Animal Origin	5 CR

1.7 Wildcard Technical Field

Credits
18-27

Mandatory		
M-MATH-102863	Technomathematical Seminar	3 CR

1.8 Computer Science

Credits
8-17

Computer Science (Election: at least 1 item as well as between 8 and 17 credits)		
M-INFO-100799	Formal Systems	6 CR
M-INFO-100801	Telematics	6 CR
M-INFO-100803	Real-Time Systems	6 CR
M-INFO-104897	Robotics III - Sensors and Perception in Robotics	3 CR
M-INFO-100818	Computer Architecture	6 CR
M-INFO-100819	Cognitive Systems	6 CR
M-INFO-100825	Pattern Recognition	6 CR
M-INFO-100833	Software Engineering II	6 CR
M-INFO-100834	Security	6 CR
M-INFO-100846	Neural Networks	6 CR
M-INFO-100856	Computer Graphics	6 CR
M-INFO-100893	Robotics I - Introduction to Robotics	6 CR
M-INFO-100840	Localization of Mobile Agents	6 CR
M-INFO-100839	Fuzzy Sets	6 CR
M-INFO-101887	Seminar Advanced Topics in Parallel Programming	3 CR
M-INFO-104460	Deep Learning and Neural Networks	6 CR
M-INFO-100829	Stochastic Information Processing	6 CR
M-INFO-106014	Introduction to Artificial Intelligence neu	5 CR
M-INFO-106015	Information Security neu	5 CR

1.9 Mathematical Specialization

Credits

19

Mandatory		
M-MATH-102730	Seminar	3 CR
Elective Field Mathematical Specialization (Election: at least 16 credits)		
M-MATH-102864	Convex Geometry	8 CR
M-MATH-102866	Geometry of Schemes	8 CR
M-MATH-102872	Evolution Equations	8 CR

Competence Certificate

oral examination of ca. 30 minutes

Prerequisites

none

Content

- group rings
- universal localizations
- Kaplansky conjectures
- property T

Module grade calculation

The grade of the module is the grade of the oral exam.

Workload

Total workload: 150 hours

Recommendation

The module 'Introduction into Algebra and Number Theory' is strongly recommended. Some knowledge of spectral theory is recommended.

M

2.10 Module: Analytical and Numerical Homogenization [M-MATH-105636]**Responsible:** Prof. Dr. Marlis Hochbruck**Organisation:** KIT Department of Mathematics**Part of:** [Applied Mathematics \(Elective Field Applied Mathematics\)](#)
[Mathematical Specialization \(Elective Field Mathematical Specialization\)](#)

1 term**Level**
4**Version**
1

Mandatory			
T-MATH-111272	Analytical and Numerical Homogenization	6 CR	Hochbruck

Prerequisites

none

Competence Goal

The topic of the lecture are numerical multiscale methods presented exemplarily for elliptic problems. Students know the basic analytical results for existence and uniqueness of the solution of multiscale problems and from homogenization theory. In addition, they know methods for the numerical approximation of multiscale and the homogenized solution. They are able to analyze the convergence of these methods and assess the pros and cons of the different approaches.

Content

- Analytical fundamentals (basic results from analysis for elliptic partial differential equations and from homogenization theory)
- Approximation of the homogenized solution (e.g. heterogeneous multiscale method)
- Approximation of the multiscale solution (e.g. local orthogonal decomposition)

Annotation

Upon request the lecture will be held in english.

M**2.11 Module: Applications of Topological Data Analysis [M-MATH-105651]****Responsible:** Dr. Andreas Ott**Organisation:** KIT Department of Mathematics**Part of:** [Applied Mathematics \(Analysis\)](#)

Mandatory			
T-MATH-106461	Aspects of Geometric Analysis	4 CR	Lamm

Competence Certificate

oral exam; duration: about 20 minutes

Prerequisites

none

Competence Goal

- The students have got to know topics of Geometric analysis.
- They are able to use and explain the techniques they have learned in the course.

Content

Classical or recent topics of Geometric analysis, for example

- Geometric evolution equations,
- Geometric variational problems,
- The theory of minimal surfaces,
- Regularity of geometric objects,
- The isoperimetric problem,
- Spectral theory on manifolds.

Recommendation

Elementare Geometrie, Klassische Methoden partieller Differentialgleichungen/Partial differential equations, Functional analysis

M**2.13 Module: Aspects of Time Integration [M-MATH-102934]****Responsible:** Prof. Dr. Marlis Hochbruck**Organisation:** KIT Department of Mathematics

M

2.14 Module: Astroparticle Physics I [M-PHYS-102075]

Responsible: Prof. Dr. Guido Drexlin
Prof. Dr. Kathrin Valerius

Organisation: KIT Department of Physics

Part of: **Experimental Physics (Experimental Physics)**

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
8	Grade to a tenth	Each winter term	1 term	German	4	1

Mandatory			
T-PHYS-102432	Astroparticle Physics I	8 CR	Drexlin, Valerius

Competence Certificate

Oral Exam. In the MSc Physics, this module is examined together with further modules attended as part of the major in physics. The total duration of the oral exam is approx. 60 minutes.

Prerequisites

none

Competence Goal

Students will be introduced to the basic concepts of astroparticle physics. The lecture teaches both the theoretical concepts and the experimental methods of this new dynamic field of work at the interface of elementary particle physics, cosmology and astrophysics. Students will learn to understand the concepts through concrete case studies from current research and will be enabled to apply the learned methods independently.

Methodological skills acquisition:

- Understanding of the fundamentals of experimental astroparticle physics.
- Recognition of methodological cross-connections to elementary particle physics, astrophysics, and cosmology.
- Acquisition of the ability to present a current research topic independently as well as in a team setting
- Acquisition of the ability to implement the concepts and experimental methods in the master thesis

Content

The topics covered include a general introduction to the field with its fundamental issues, theoretical concepts and experimental methods. Corresponding to the very different energy scales (meV - 1020 eV) of astroparticle physics, the lecture is divided into a discussion of the processes in the thermal (low energies) and non-thermal (high energies) universe. A special focus of the lecture is a comprehensive presentation of modern experimental techniques, e.g. in the search for very rare processes. Based on this, in the second part of the lecture a comprehensive introduction to the "dark universe" and the search for dark matter is given.

The lecture is the basis of further lectures on this topic (Astroparticle Physics II).

Workload

240 hours consisting of attendance time (60 hours), wrap-up of the lecture incl. exam preparation and preparation of the exercises(180 hours)

Recommendation

Basic knowledge from the lecture "Nuclei and Particles".

Literature

- Donald Perkins, Particle Astrophysics (Oxford University Press, 2. Auflage, 2009)

T-PHYS-102529	Basics of Nanotechnology I	4 CR	Goll

Competence Certificate

Oral Exam. In the MSc Physics, this module is examined together with further modules attended as part of the major in physics. The total duration of the oral exam is approx. 60 minutes.

Prerequisites

none

Competence Goal

Students deepen their knowledge in one area of nano-physics, master the relevant theoretical concepts and are familiar with basic techniques and measurement methods of nano-analytics and lithography.

Content

Introduction to central areas of nanotechnology;

Teaching of the conceptual, theoretical and, in particular, methodological fundamentals:

- Methods of imaging and characterization (nanoanalytics)
Basic concepts of electron microscopy and associated analytical capabilities are covered in an introductory manner. Scanning probe techniques such as tunneling and force microscopy for the investigation and imaging of conductive and insulating sample surfaces, respectively, are discussed. Complementary spectroscopic capabilities of the scanning probe techniques will be explained.
- Methods of nanostructure fabrication (lithography and self-assembly)
Along the individual process steps from coating and exposure to structure transfer by etching and vapor deposition, the methods used will be explained, their application limits discussed and current developments highlighted.

The lecture "Nanotechnology II" covers application areas and current research topics in the summer semester.

Workload

120 hours consisting of attendance time (30 hours), wrap-up of lecture incl. exam preparation. (90 hours)

Recommendation

Basic knowledge of solid state physics and quantum mechanics is expected.

Literature

For follow-up and consolidation of the lecture material, reference is made to various textbooks as well as original and review articles. A detailed list will be given in the lecture.

Competence Certificate

Oral Exam. In the MSc Physics, this module is examined together with further modules attended as part of the major in physics. The total duration of the oral exam is approx. 60 minutes.

Prerequisites

none

Competence Goal

The student deepens his knowledge in the field of nanophysics, masters the relevant theoretical concepts and is familiar with the basic application areas of nanophysics. The student is able to interpret current data and figures from the scientific literature and to present the current state of research as well as important "open questions".

Content

Introduction to central areas of nanotechnology

Teaching of the conceptual, theoretical and especially methodological basics;

Applications and current developments in the fields of nanoelectronics, nanooptics, nanomechanics, nanotribology, biological nanostructures, self-organized nanostructures, among others.

In addition, the lecture "Fundamentals of Nanotechnology I" in the winter semester deals with methods of imaging, characterization and fabrication of nanostructures.

Workload

120 hours consisting of attendance time (30 hours), wrap-up of the lecture incl. exam preparation and working on the exercises (90 hours)

Recommendation

Basic knowledge of solid state physics and quantum mechanics is expected.

Literature

For follow-up and consolidation of the lecture material, reference is made to various textbooks as well as original and review articles. A detailed list will be given in the lecture.

4	Grade to a tenth	Each summer term	1 term	English	4	1

Mandatory			
T-MATH-112842	Bayesian Inverse Problems with Connections to Machine Learning	4 CR	Krumscheid

Competence Certificate

oral exam of ca. 30 min

Prerequisites

None

Competence Goal

After completing the module's classes and the exam, students will be familiar with the theory of inverse problems. They will be able to apply the Bayesian framework to a given inverse problem and assess the well-posedness of the Bayesian posterior. In addition, students will be able to describe the basics of several solution methods for accessing the Bayesian posterior, including approximation and machine-learning techniques, and their limitations. Finally, they will be able to name and discuss essential theoretical concepts for Bayesian inversion in Banach spaces and describe the suitable sampling-based solution techniques. In particular, the course prepares students to write a thesis in the field of Uncertainty Quantification.

Content

The course offers an introduction to the subject of statistical inversion, where, in its most basic form, the goal is to study how to estimate model parameters from data. We will introduce mathematical concepts and computational tools for systematically treating these inverse problems in a Bayesian framework, including an assessment of how uncertainties affect the solution. In the first part of the course, we will study the Bayesian framework for finite-dimensional inverse problems. While the first part will introduce some machine-learning ideas, the second part will address how machine learning is impacting, and has the potential to impact further on, the subject of inverse problems. In the final part of the course, we will generalize the Bayesian inverse problem theory to a Banach space setting and discuss sampling strategies for accessing the Bayesian posterior.

Topics covered include:

- Bayesian Inverse Problems and Well-Posedness
- The Linear-Gaussian Setting
- Optimization Perspective on Bayesian Inverse Problems
- Gaussian Approximation
- Markov Chain Monte Carlo
- Blending Inverse Problems and Machine-Learning
- Bayesian Inversion in Banach spaces

Module grade calculation

The grade of the module is the grade of the oral exam.

Workload

total workload: 120 hours

Recommendation

The contents of the modules 'M-MATH-101321 - Introduction to Stochastics', 'M-MATH-103214 – Numerical Mathematics 1+2', and 'M-MATH-106053 – Stochastic Simulation' are recommended.

1 term**Language**
English**Level**
4**Version**
2

Mandatory			
T-MATH-105916	Combinatorics	8 CR	Aksenovich

Competence Certificate

The final grade is given based on the written final exam (3h).

By successfully working on the problem sets, a bonus can be obtained. To obtain the bonus, one has to achieve 50% of the points on the solutions of the exercise sheets 1-6 and also of the exercise sheets 7-12. If the grade in the final written exam is between 4,0 and 1,3, then the bonus improves the grade by one step (0,3 or 0,4).

Prerequisites

none

Competence Goal

The students understand, describe, and use fundamental notions and techniques in combinatorics. They can analyze, structure, and formally describe typical combinatorial questions. The students can use the results and methods such as inclusion-exclusion, generating functions, Young tableaux, as well as the developed proof ideas, in solving combinatorial problems. In particular, they can analyze the existence and the number of ordered and unordered arrangements of a given size. The students understand and critically use the combinatorial methods. Moreover, the students can communicate using English technical terminology.

Content

The course is an introduction into combinatorics. Starting with counting problems and bijections, classical methods such as inclusion-exclusion principle and generating functions are discussed. Further topics include Catalan families, permutations, Young tableaux, partial orders, and combinatorial designs.

Module grade calculation

The grade of the module is the grade of the written exam.

Annotation

- Regular cycle: every 2nd year, summer semester
- Course is held in English

M

2.30 Module: Combustion Technology [M-CIWVT-103069]**Responsible:** Prof. Dr.-Ing. Dimosthenis Trimis**Organisation:** KIT Department of Chemical and Process Engineering**Part of:** [Chemical and Process Engineering \(Chemical and Process Engineering\)](#)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
6	Grade to a tenth	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-106104	Combustion Technology	6 CR	Trimis

Competence Certificate

Learning Control is an oral examination with a duration of about 20 minutes (section 4 subsection 2 SPO). Grade of the module is the grade of the oral examination.

Prerequisites

None

Competence Goal

- The students are able to describe and explain the characteristics of the different flame types.
- The students can quantitatively estimate/calculate major combustion characteristics like flame temperature and flame velocity. They further understand the physicochemical mechanisms affecting flammability limits and quenching distances.
- The students understand and can assess the influence/interaction of turbulence, heat and mass transfer to reacting flows.
- The students understand the flame structure and the hierarchical structure of reaction kinetic mechanisms.
- The students understand and can assess the influence of interaction between different time scales of chemical kinetics and fluid flow in reacting flows.
- The students are able to assess and evaluate burner operability with regard to the application.

Content

- Introduction and significance of combustion technology
- Thermodynamics of combustion: Mass and energy/enthalpy balances
- Equilibrium composition
- Flame temperature
- Reaction mechanisms in combustion processes
- Laminar flame velocity and thermal flame theory
- Kinetics related combustion characteristics and experimental characterization: laminar flame velocity, flammability limits, ignition temperature, ignition energy, ignition delay time, quenching distance, flash point, octane and cetane number
- Turbulent flame propagation
- Industrial burner types

Workload

- Lectures and Exercises: 45 h
- Homework: 25 h
- Exam Preparation: 110 h

Literature

Competence Certificate

The examination is a written examination with a duration of 90 minutes (section 4 subsection 2 number 1 SPO).
 The grade of the written examination is the module grade.

Prerequisites

None

Competence Goal

Learning the fundamentals of CFD for the calculation of flow problems.

Content

Navier-Stokes equations, numerical schemes, turbulence, multiphase flows.

Workload

- Attendance time (Lecture): 64 h
- Homework: 56 h
- Exam Preparation: 601 h

Literature

Nirschl: Skript zur Vorlesung CFD

Ferziger, Peric: Numerische Strömungsmechanik

Oertel, Laurien: Numerische Strömungsmechanik

M

2.37 Module: Computational Group Theory [M-MATH-106240]**Responsible:** Dr. Marek Kaluba**Organisation:** KIT Department of Mathematics**Part of:** [Applied Mathematics \(Elective Field Applied Mathematics\)](#)
[Mathematical Specialization \(Elective Field Mathematical Specialization\)](#)
[Additional Examinations](#)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
8	Grade to a tenth	Irregular	1 term	English	4	1

Mandatory			
T-MATH-112670	Computational Group Theory Tutorial	2 CR	Kaluba
T-MATH-112669	Computational Group Theory exam	6 CR	Kaluba

Competence Certificate

coursework in the tutorial plus oral examination of ca. 20 minutes

Prerequisites

none

Competence Goal

The aim of the course is to give a gentle introduction to group theory from a computational point of view. The students will learn not only the mathematical theory, but also how to think in terms of the computational feasibility. As a result students will develop computational understanding for questions within group theory.

After successful participation students can

- understand the difference between construction and definition by property
- understand how scaling of the computational problems influences the choice of algorithms and data structures
- choose the correct algorithms and data structures balancing speed and storage to obtain computational feasibility
- exploit the structure of permutation groups to quickly find (some or all) elements satisfying requested properties.
- understand the basics of the theory of automata and their role for computation in finitely presented groups
- use string-rewriting algorithms to potentially solve the word problem in (some) finitely presented groups.

Content

1. Group actions, orbits, stabilizers, Schreier vectors
2. Permutation groups, bases, Stabilizer chains, Schreier-Sims algorithm.
3. Broad overview of transitive groups, primitive groups
4. Finitely presented groups, their homomorphisms, quotients
5. Formal languages, and rewriting systems
6. Knuth-Bendix completion
7. Automata for problems in finitely presented groups
8. Coset enumeration, subgroups and their presentation

Module grade calculation

The module grade is the weighted average of the grade of the oral exam (weight 75%) and the grade of the tutorial (weight 25%).

The assessment of the tutorial can have different forms, which will be determined during the course, e.g. a seminar talk or a programming task (documented by a report and the source code).

Workload

total workload: 240 hours

Attendance: 90 h

- lectures and tutorials including the examination

Self studies: 150 h

- follow-up and deepening of the course content,
- work on problem sheets and programming tasks
- literature study and internet research on the course content,
- preparation for the module examination

Recommendation

Some basic understanding of group theory and programming are strongly recommended.

Competence Certificate

Oral Exam. In the MSc Physics, this module is examined together with further modules attended as part of the major in physics. The total duration of the oral exam is approx. 60 minutes.

Exercises are offered to complement the lecture. Prerequisite for the participation in the oral module final examination is the passing of the course work in the exercises. The course work takes place in the form of exercises. To pass, 50% of the exercises must be passed.

Prerequisites

none

Modeled Conditions

The following conditions have to be fulfilled:

1. The module [M-PHYS-102053 - Condensed Matter Theory I, Fundamentals and Advanced Topics](#) must not have been started.

Competence Goal

Gaining understanding of phenomena and concepts in condensed matter theory, mastering basic theoretical tools for their description, and acquiring the ability to analyze and solve theoretically a limited class of problems in the field of condensed matter physics.

Content

Lectures and exercises convey and deepen the basic concepts of condensed matter theory, particular attention is paid to crystalline solids. The main subjects of the lecture are:

- Crystal lattices, electrons in periodic potentials, dynamics of Bloch electrons;
- Electronic transport properties of solids, Boltzmann equation;
- Solids in an external magnetic field: Pauli paramagnetism, Landau diamagnetism, de Haas-van Alphen effect;
- Electron-electron interaction, Stoner theory of ferromagnetism;
- Landau theory of Fermi liquids; Phonons and electron-phonon interaction

Workload

240 hours consisting of attendance time (60 hours), wrap-up of the lecture incl. exam preparation and working on the exercises (180 hours).

Recommendation

Basic knowledge of solid state physics, quantum mechanics, statistical physics and thermodynamics is required.

Literature

- C. Kittel, Einführung in die Festkörperphysik (Oldenburg, 1980) / Introduction to Solid State Physics.
- C. Kittel, Quantum Theory of Solids.
- N.W. Ashcroft and N.D. Mermin, Solid State Physics (Holt, Rinehart & Winston, N.Y 1976).

T-ETIT-100640	Electromagnetics and Numerical Calculation of Fields	4 CR	Zwick

Competence Certificate

Success control is carried out in the form of a written test of 120 minutes.

Prerequisites

none

Competence Goal

Students with very different background in electromagnetic field theory will be brought to a high level of comprehension. They will understand the concept of electric & magnetic fields and of electric potential & vector potential and they will be able to solve simple problems of electric & magnetic fields using mathematics. They will understand the equations and solutions of wave creation and wave propagation. Finally the student will have learnt the basics of numerical field calculation and be able to use software packages of numerical field calculation in a comprehensive and critical way.

The student will

- be able to deal with all quantities of electromagnetic field theory (E, D, B, H, J, M, P, ...), in particular: how to calculate and how to measure them,
- derive various equations from the Maxwell equations to solve simple field problems (electrostatics, magnetostatics, steady currents, electromagnetics),
- be able to deal with the concept of field energy density and solve practical problems using it (coefficients of capacitance and coefficients of inductance),
- be able to derive and use the wave equation, in particular: to solve problems how to create a wave and calculate solutions of wave propagation through various media,
- be able to outline the concepts, the main application areas and the limitations of methods of numerical field calculation (FDM, FDTD, FIM, FEM, BEM, MoM, TLM)
- be able to use one exemplary software package of numerical field calculation and solve simple practical problems with it.

Content

This course first gives a comprehensive recap of Maxwell equations and important equations of electromagnetic field theory. In the second part the most important methods of numerical field calculation are introduced.

Maxwell's equations, materials equations, boundary conditions, fields in ferroelectric and ferromagnetic materials

electric potentials, electric dipole, Coulomb integral, Laplace and Poisson's equation, separation of variables in cartesian, cylindrical and spherical coordinates

Dirichlet Problem, Neumann Problem, Greens function, Field energy density and Poynting vector,

electrostatic field energy, coefficients of capacitance, vector potential, Coulomb gauge, Biot-Savart-law, magnetic field energy, coefficients of inductance magnetic flux and coefficients of mutual inductance, field problems in steady electric currents,

law of induction, displacement current

general wave equation for E and H, Helmholtz equation

skin effect, penetration depth, eddy currents

retarded potentials, Coulomb integral with retarded potentials

wave equation for potential and Vector potential and A, Lorentz gauge, plane waves

Hertzian dipole, near field solution, far field solution

transmission lines, fields in coaxial transmission lines

waveguides, TM-waves, TE-waves

finite difference method FDM

finite difference - time domain FDTD, Yee's algorithm

finite difference - frequency domain

finite integration method FIM

finite element method FEM

boundary element method BEM, Method of Moments (MOM), Transmission Line Matrix Method (TLM),

solving large systems of linear equations

basic rules for good numerical field calculation

The lecturer reserves the right to alter the contents of the course without prior notification.

Module grade calculation

The module grade is the grade of the written exam.

Workload

Each credit point corresponds to approximately 25-30 hours of work (of the student). This is based on the average student who achieves an average performance. The workload includes:

Attendance time in lectures (3 h 15 appointments each) = 45 h

Self-study (4 h 15 appointments each) = 60 h

Preparation / post-processing = 20 h

Total effort approx. 125 hours = 4 LP

Recommendation

Fundamentals of electromagnetic field theory.

Mandatory			
T-PHYS-102577	Electronic Properties of Solids I, with Exercises	10 CR	Le Tacon, Wernsdorfer, Wulfhekel

Competence Certificate

Oral Exam. In the MSc Physics, this module is examined together with further modules attended as part of the major in physics. The total duration of the oral exam is approx. 60 minutes.

Prerequisites

none

Modeled Conditions

The following conditions have to be fulfilled:

1. The module [M-PHYS-102090 - Electronic Properties of Solids I, without Exercises](#) must not have been started.

Competence Goal

Students will be familiar with the most common experimental methods for studying the electronic properties of condensed matter and some of the key theoretical concepts that underlie them. They master the basic tools for studying and understanding heat transport, scattering mechanisms, phase transitions, and magnetism. Exercises will reinforce the acquired knowledge and apply it to classical condensed matter problems.

Content

- Metal and insulators: Band structure, Fermi surface
- Electronic and heat transport - scattering mechanisms
- Phase transitions: Landau theory, critical exponents
- Atomic magnetism and magnetic interactions
- Magnetic structures, dynamics

Annotation

The course will be given in English. Questions and discussions in German are welcome as well.

Workload

300 hours consisting of attendance time (75 hours), wrap-up of the lecture incl. exam preparation and preparation of the exercises (225 hours)

Recommendation

Basic knowledge of solid state physics, quantum mechanics, and thermodynamics and statistical physics is assumed.

Literature

Oral Exam. In the MSc Physics, this module is examined together with further modules attended as part of the major in physics. The total duration of the oral exam is approx. 60 minutes.

Prerequisites

none

Modeled Conditions

The following conditions have to be fulfilled:

1. The module [M-PHYS-102109 - Electronic Properties of Solids II, without Exercises](#) must not have been started.

Competence Goal

Students know the physical properties of superconductivity, a thermodynamic state of the electronic system of solids. They understand classical and modern experimental findings as well as basic theoretical models, such as the concept of the energy gap or the quasiparticle, which is also commonly used outside superconductivity. They apply the acquired knowledge to specific problems. The students are able to familiarize themselves with current literature on the subject of superconductivity.

Content

Foundations of superconductivity: thermodynamics, electrodynamics, flux quantization, Ginzburg-Landau theory, BCS theory, vortices, tunnel junctions, Josephson junctions, SQUIDs, superconducting electronics, superconducting qubits.

Annotation

The course will be given in English. Questions and discussions in German are welcome as well.

Workload

240 hours consisting of attendance time (60 hours), follow-up of the lecture incl. exam preparation and preparation of the exercises (180 hours).

Recommendation

Basic knowledge of solid state physics, quantum mechanics, and thermodynamics is assumed.

Competence Certificate

Oral exam of approximately 20 minutes

Prerequisites

None

Content

In this class we consider the construction, analysis, implementation and application of exponential integrators. The focus will be on two types of stiff problems.

The first one is characterized by a Jacobian that possesses eigenvalues with large negative real parts. Parabolic partial differential equations and their spatial discretization are typical examples. The second class consists of highly oscillatory problems with purely imaginary eigenvalues of large modulus.

Apart from motivating the construction of exponential integrators for various classes of problems, our main intention in this class is to present the mathematics behind these methods. We will derive error bounds that are independent of stiffness or highest frequencies in the system.

Since the implementation of exponential integrators requires the evaluation of the product of a matrix function with a vector, we will briefly discuss some possible approaches as well.

4	Grade to a tenth	Irregular	1 term	English	4	2

Mandatory			
T-MATH-105931	Extremal Graph Theory	4 CR	Aksenovich

Competence Certificate

The final grade is given based on an oral exam (approx. 30 min.).

Competence Goal

The students understand, describe, and use fundamental notions and techniques in extremal graph theory. They can analyze, structure, and formally describe typical combinatorial questions. The students understand and use Szemerédi's regularity lemma and Szemerédi's theorem, can use probabilistic techniques, such as dependent random choice and multistep random colorings, know the best bounds for the extremal numbers of complete graphs, cycles, complete bipartite graphs, and bipartite graphs with bounded maximum degree. They understand and can use the Ramsey theorem for graphs and hypergraphs, as well as stepping-up techniques for bounding Ramsey numbers. Moreover, the students know and understand the behavior of Ramsey numbers for graphs with bounded maximum degree. The students can communicate using English technical terminology.

Content

The course is concerned with advanced topics in graph theory. It focuses on the areas of extremal functions, regularity, and Ramsey theory for graphs and hypergraphs. Further topics include Turán's theorem, Erdős-Stone theorem, Szemerédi's lemma, graph colorings and probabilistic techniques.

Annotation

Course is held in English

Recommendation

Basic knowledge of linear algebra, analysis and graph theory is recommended.

Competence Certificate

The final grade is given based on the written final exam (3h).

By successfully working on the problem sets, a bonus can be obtained. To obtain the bonus, one has to achieve 50% of the points on the solutions of the exercise sheets 1-6 and also of the exercise sheets 7-12. If the grade in the final written exam is between 4,0 and 1,3, then the bonus improves the grade by one step (0,3 or 0,4).

Prerequisites

None

Competence Goal

The students understand, describe and use fundamental notions and techniques in graph theory. They can represent the appropriate mathematical questions in terms of graphs and use the results such as Menger's theorem, Kuratowski's theorem, Turan's theorem, as well as the developed proof ideas, to solve these problems. The students can analyze graphs in terms of their characteristics such as connectivity, planarity, and chromatic number. They are well positioned to understand graph theoretic methods and use them critically. Moreover, the students can communicate using English technical terminology.

Content

The course Graph Theory treats the fundamental properties of graphs, starting with basic ones introduced by Euler and including the modern results obtained in the last decade. The following topics are covered: structure of trees, paths, cycles and walks in graphs, minors, unavoidable subgraphs in dense graphs, planar graphs, graph coloring, Ramsey theory, and regularity in graphs.

Annotation

T-MATH-111289	Harmonic Analysis	8 CR	Frey, Kunstmann, Schnaubelt, Tolksdorf

Content

- Fourier series
- Fourier transform on L^1 and L^2
- Tempered distributions and their Fourier transform
- Explicit solutions of the Heat-, Schrödinger- and Wave equation in \mathbb{R}^n
- the Hilbert transform
- the interpolation theorem of Marcinkiewicz
- Singular integral operators
- the Fourier multiplier theorem of Mihlin

M**2.83 Module: Harmonic Analysis for Dispersive Equations [M-MATH-103545]****Responsible:** apl. Prof. Dr. Peer Kunstmann**Organisation:** KIT Department of Mathematics**Part of:** [Applied Mathematics \(Analysis\)](#)

Mandatory			
T-MATH-107071	Harmonic Analysis for Dispersive Equations	8 CR	Kunstmann

Prerequisites

None

Content

Fourier transform, Fourier multipliers, interpolation, singular integral operators, Mihlin's Theorem, Littlewood-Paley decomposition, oscillating integrals, dispersive estimates, Strichartz estimates, nonlinear equations.

M

2.84 Module: Harmonic Analysis on Fractals [M-MATH-106287]

Responsible: Prof. Dr. Dorothee Frey**Organisation:** KIT Department of Mathematics**Part of:** [Applied Mathematics \(Analysis\)](#)
[Mathematical Specialization \(Elective Field Mathematical Specialization\)](#)
[Additional Examinations](#)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
3	Grade to a tenth	Once	1 term	English	4	1

Mandatory			
T-MATH-112742	Harmonic Analysis on Fractals	3 CR	Frey

Prerequisites

none

Competence Goal

After the course, students will be able to discuss

- examples of fractals and their properties,
- different notions of fractal dimension and their relationships,
- the interaction between metric and harmonic-analytic properties of fractals,
- selected recent developments in the harmonic analysis of fractals.

Content

This course aims to be an accessible introduction to fractals and selected aspects of their modern harmonic-analytic theory.

We first introduce examples of fractals and their dimension theory:

- fractals in nature, Cantor sets and Bernoulli convolutions, number-theoretic fractals, Brownian motion, Kakeya sets,
- Hausdorff dimension, box dimension and intermediate dimensions,
- Fourier transforms of measures and Fourier dimension.

Then we study topics of recent research interest in harmonic analysis:

- Fourier restriction theorems on fractals,
- fractal uncertainty principles.

Recommendation

Some basic knowledge of functional analysis is recommended.

M**2.85 Module: Heat Transfer II [M-CIWVT-103051]**

Responsible: Prof. Dr.-Ing. Thomas Wetzel
Organisation: KIT Department of Chemical and Process Engineering
Part of: [Chemical and Process Engineering \(Chemical and Process Engineering\)](#)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
4	Grade to a tenth	Each winter term	1 term	German	4	3

Mandatory			
T-CIWVT-106067	Heat Transfer II	4 CR	Wetzel

Competence Certificate

The examination is an oral examination with a duration of 20 minutes (section 4 subsection 2 number 2 SPO).
 Module grade is the grade of the oral examination.

Prerequisites

None

Competence Goal

Students can deduce the basic differential equations of thermofluid dynamics and know possible simplifications. They know different analytical and numerical solution methods for the transient temperature field equation in quiescent media and are able to use them actively. Students are able to apply these solution methods independently to other heat conduction problems such as the heat transfer in fins and needles.

Content

Advanced topics in heat transfer:

Thermo-fluid dynamic transport equations, transient heat conduction; thermal boundary conditions; analytical methods (combination and separation of variables, Laplace transform); numerical methods (finite difference and volume methods); heat transfer in fins and needles

Module grade calculation

The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 30 h

T-MATH-112119	Introduction to Convex Integration	3 CR	Zillinger

Competence Certificate

The module will be completed with an oral exam (approx. 30 min).

Prerequisites

none

Competence Goal

The main aim of this lecture is to introduce students to convex integration as a tool to construct solutions to partial differential equations.

In particular, they will be able to

- discuss the structure of convex integration algorithms,
- state major theorems and their relation,
- discuss regularity of convex integration solutions and uniqueness,
- discuss building blocks of constructions and their properties.

Content

This lecture provides an introduction to the methods of convex integration and its applications:

- for isometric immersions,
- for the m-well problem in elasticity,
- for equations of fluid dynamics and
- higher regularity of convex integration solutions.

Module grade calculation

The grade of the module is the grade of the oral exam.

Workload

Total workload: 90 hours

Attendance: 30 h

- lectures and examination

Self studies: 60 h

- follow-up and deepening of the course content,
- literature study and internet research on the course content,
- preparation for the module examination

Recommendation

The modules "Classical Methods for Partial Differential Equations" and "Functional Analysis" are recommended.

M

2.97 Module: Introduction to Cosmology [M-PHYS-102175]**Responsible:** Prof. Dr. Guido Drexlin**Organisation:** KIT Department of Physics**Part of:** [Experimental Physics \(Experimental Physics\)](#)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
6	Grade to a tenth	Each winter term	1 term	German	4	1

Mandatory			
T-PHYS-102384	Introduction to Cosmology	6 CR	Drexlin

Competence Certificate

Oral Exam. In the MSc Physics, this module is examined together with further modules attended as part of the major in physics. The total duration of the oral exam is approx. 60 minutes.

Competence Goal

Students will be introduced to the basic concepts of cosmology. The lecture will provide both the theoretical concepts and an overview of modern experimental methods and observational techniques. The students will be enabled to understand the concepts by means of concrete case studies from modern cosmology and will be enabled to apply the learned methods in the context of later independent research.

Methodological Competency Acquisition:

- Understanding of the fundamentals of cosmology
- Recognition of methodological cross-connections to elementary particle physics and astroparticle physics.
- Acquisition of the ability to work independently on current research topics as preparation for the master thesis.

Content

The lecture offers an introduction to modern cosmology, which has taken an enormous upswing in recent years due to the use of state-of-the-art technologies (Planck satellite, galaxy surveys such as 2dF and SDSS) and accompanying computationally intensive simulations (Millennium). The large number of observations has led to the establishment of a so-called concordance model of cosmology, in which the contributions of dark energy and dark matter dominate the evolution of large-scale structures in the universe.

Starting from a description of the early universe with the supporting pillars of the Big Bang theory (Hubble expansion, nucleosynthesis, cosmic background radiation) and the phase transitions and symmetry breaking that occur in the process, the formation and evolution of large-scale structures in the universe up to today's "dark universe" is discussed (comparison of "top-down" with "bottom-up" models). Special attention is given to a detailed presentation of the most modern experimental techniques and methods of analysis, which have found their way into wide areas of physics.

The lecture thus provides a coherent picture of modern cosmology and discusses fundamental issues also in neighboring disciplines such as particle physics and astrophysics and can therefore be complemented with other lectures in the field of Experimental Astroparticle Physics and Experimental Particle Physics.

Workload

180 hours consisting of attendance time (45 hours), wrap-up of the lecture incl. exam preparation and preparation of the exercises (135 hours).

Recommendation

Basic knowledge from lecture "Nuclei and Particles"

Literature

Will be mentioned in the lecture.

M**2.98 Module: Introduction to Fluid Dynamics [M-MATH-105650]****Responsible:** Prof. Dr. Wolfgang Reichel**Organisation:** KIT Department of Mathematics**Part of:** [Applied Mathematics \(Analysis\)](#)

4**Version**
2

Mandatory			
T-MATH-111297	Introduction to Fluid Dynamics	3 CR	Reichel

Prerequisites

None

Competence Goal

The main aim of this lecture is to introduce students to mathematical fluid dynamics. In particular, by the end of the course students will be able to

- discuss and explain the various formulations of the Euler equations and when these formulations are equivalent,
- state major theorems and their relation,
- discuss weak formulations, existence and uniqueness results.

Content

Mathematical description and analysis of fluid dynamics:

- physical motivation of the incompressible Euler and Navier-Stokes equations,
- Vorticity-Stream formulation and Eulerian and Lagrangian coordinates,
- Local existence theory and energy methods,
- Weak solutions and the Beale-Kato-Majda criterion.

Recommendation

Partial Differential Equations

M

2.99 Module: Introduction to Fluid Mechanics [M-MATH-106401]

Mandatory			
T-MATH-112927	Introduction to Fluid Mechanics	6 CR	Liao

Competence Certificate

The module examination takes the form of an oral examination of approx. 25 minutes.

Prerequisites

None

Competence Goal

Graduates can

- recognize the essential formulations of the partial differential equations in fluid mechanics and explain them using examples,
- use techniques to describe the weak and strong solutions for the Euler and Navier-Stokes equations, and show the existence, uniqueness and regularity results,
- name the special difficulties in the three-dimensional case,
- understand the concept of stratification and explain it using concrete examples.

Content

- Derivation of models, modeling
- Euler equations, Navier-Stokes equations
- Biot-Savart law, Leray-Hopf decomposition
- Wellposedness results
- Regularity results

Module grade calculation

The module grade is the grade of the oral exam.

Workload

total work load: 180 hours

Recommendation

The module *Functional Analysis* is strongly recommended.

Competence Certificate

oral examination of circa 30 minutes

Prerequisites

none

Competence Goal

The main aim of this lecture is to introduce students to the theory of kinetic transport equations. In particular, by the end of the course students will be able to

- discuss properties of the free transport, Boltzmann and Vlasov-Poisson equations,
- state major theorems and their relation,
- discuss notions of solutions and their properties,
- discuss the effects of phase mixing and challenges of nonlinear equations.

Content

Mathematical description and analysis of kinetic transport equations:

- the free transport, Boltzmann and Vlasov-Poisson equations,
- linear theory, phase mixing and Landau damping,
- equilibrium solutions and stability,
- nonlinear results and methods,
- renormalized solutions.

Module grade calculation

The module grade is the grade of the final oral exam.

Workload

Total workload: 90 h

Attendance: 30 h

- lectures and examination

Self studies: 60 h

- follow-up and deepening of the course content,
- literature study and internet research on the course content,
- preparation for the module examination

Recommendation

The course "Classical Methods for Partial Differential Equations" should be studied beforehand.

M**2.103 Module: Introduction to Kinetic Theory [M-MATH-103919]****Responsible:** Prof. Dr. Martin Frank**Organisation:** KIT Department of Mathematics

Part of: [Applied Mathematics \(Elective Field Applied Mathematics\)](#)
[Mathematical Specialization \(Elective Field Mathematical Specialization\)](#)
 Additional Examinations

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
4	Grade to a tenth	Each winter term	1 term	English	4	1

Mandatory			
T-MATH-108013	Introduction to Kinetic Theory	4 CR	Frank

Prerequisites

None

Competence Goal

After successfully taking part in the module's classes and exams, students have gained knowledge and abilities as described in the "Inhalt" section. Specifically, Students know common means of mesoscopic and macroscopic description of particle systems. Furthermore, students are able to describe the basics of multiscale methods, such as the asymptotic analysis and the method of moments. Students are able to apply numerical methods to solve engineering problems related to particle systems. They can name the assumptions that are needed to be made in the process. Students can judge whether specific models are applicable to the specific problem and discuss their results with specialists and colleagues.

Content

- From Newton's equations to Boltzmann's equation
- Rigorous derivation of the linear Boltzmann equation
- Properties of kinetic equations (existence & uniqueness, H theorem)
- The diffusion limit
- From Boltzmann to Euler & Navier-Stokes
- Method of Moments
- Closure techniques
- Selected numerical methods

Recommendation

Partial Differential Equations, Functional Analysis

Competence Certificate

oral examination of circa 30 minutes

Prerequisites

none

Competence Goal

- Students will become familiar with the notions of Fourier multipliers and pseudo-differential operators
- Students can state major theorems and their relation
- Students will understand the structure of the propagation of singularities by introducing the wave front set and apply them to the domain of partial differential equations, control theory, etc.

Content

1. Pseudo-differential operators
2. Symbolic calculus
3. Wavefront set
4. Propagation of singularities
5. Microlocal defective measure

Module grade calculation

The module grade is the grade of the final oral exam.

Workload

Total workload: 90 h

Attendance: 30 h

- lectures and examination

Self studies: 60 h

- follow-up and deepening of the course content,
- literature study and internet research on the course content,
- preparation for the module examination

Recommendation

The following courses should be studied beforehand: "Classical Methods for Partial Differential Equations" und "Functional Analysis".

M**2.106 Module: Introduction to Scientific Computing [M-MATH-102889]**

Responsible: Prof. Dr. Willy Dörfler

Competence Certificate

The module will be completed with an oral exam (approx. 30 min).

Prerequisites

none

Competence Goal

The students will

- know fundamental examples for linear and non-linear stochastic differential equations,
- be able to apply basic solution concepts for stochastic differential equations,
- know fundamental theorems of stochastic calculus and will be able to apply these to stochastic differential equations.

Content

1. Introduction and recapitulation of stochastic integration, Itô's formula, Lévy Theorem
2. Burkholder-Davis-Gundy inequality
3. Existence and uniqueness of solutions of stochastic differential equations
4. Explicit solutions of linear stochastic differential equations
5. Change of the time scale of Brownian motion
6. Representation of continuous time martingales
7. Brownian martingales
8. Local and global solutions of stochastic differential equations
9. Girsanov Theorem

Module grade calculation

The module grade is the grade of the oral exam.

Workload

Total workload: 120 hours

Recommendation

The contents of the module "Probability Theory" are strongly recommended. The module "Continuous Time Finance" is recommended.

Modeled Conditions

The following conditions have to be fulfilled:

1. You need to have earned at least 70 credits in the following fields:
 - Wildcard Technical Field
 - Applied Mathematics
 - Internship
 - Chemical and Process Engineering
 - Electrical Engineering / Information Technology
 - Experimental Physics
 - Computer Science
 - Mathematical Specialization
 - Interdisciplinary Qualifications

Prerequisites

None

Competence Goal

The students are familiar with the basic questions in kinetic theory and methodical approaches to their solutions. With the acquired knowledge they are able to understand the required analytical methods and are able to apply them to the basic equations in kinetic theory.

Content

- Boltzmann equation: Cauchy problem and properties of solutions
- entropy and H theorem
- equilibrium and convergence to equilibrium
- other models of kinetic theory

M**2.122 Module: Maxwell's Equations [M-MATH-102885]****Responsible:** PD Dr. Frank Hettlich**Organisation:** KIT Department of Mathematics

2.124 Module: Medical Imaging Techniques I [M-ETIT-100384]

Responsible: Prof. Dr. Maria Francesca Spadea

Organisation: KIT Department of Electrical Engineering and Information Technology

Part of: [Electrical Engineering](#) / [Information Technology](#) ([Electrical Engineering](#) / [Information Technology](#))

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
3	Grade to a tenth	Each winter term	1 term	German	4	1

Mandatory			
T-ETIT-101930	Medical Imaging Techniques I	3 CR	Spadea

Competence Certificate

Success control is carried out in the form of a written test of 120 minutes.

Prerequisites

none

Competence Goal

Students have a thorough understanding of all methods of medical imaging with ionizing radiation. They know the physical basics, the technical solutions and the essential aspects when using imaging in medicine.

Content

- X-ray physics and technology of X-ray imaging
- Digital radiography, X-ray image intensifier, flat X-ray detectors
- Theory of imaging systems, modulation transfer function
- and quantum detection efficiency
- Computer tomography CT
- Ionizing radiation, dosimetry and radiation protection
- SPECT and PET

Module grade calculation

The module grade is the grade of the written exam.

Workload

Each credit point corresponds to approximately 30 hours of work (of the student). This is based on the average student who achieves an average performance. The workload includes:

Attendance time in lectures (2 h 15 appointments each) = 30 h

Self-study (3 h 15 appointments each) = 45 h

Preparation / post-processing = 20 h

Total effort approx. 95 hours = 3 LP

2.125 Module: Medical Imaging Techniques II [M-ETIT-100385]

Prerequisites

none

Competence Goal

Students have a thorough understanding of all methods of medical imaging without ionizing radiation. They know the physical basics, the technical solutions and the essential aspects when using imaging in medicine.

Content

- Ultrasound imaging
- Thermography
- Optical tomography
- Impedance tomography
- Imaging of bioelectric sources
- Endoscopy
- Magnetic resonance imaging
- Multi-modal imaging
- Molecular imaging

Module grade calculation

The module grade is the grade of the written exam.

Workload

Each credit point corresponds to approximately 25-30 hours of work (of the student). This is based on the average student who achieves an average performance. The workload includes:

Attendance time in lectures (2 h 15 appointments each) = 30 h

Self-study (3 h 15 appointments each) = 45 h

Preparation / post-processing = 20 h

Total effort approx. 95 hours = 3 LP

Recommendation

The contents of the M-ETIT-100384 module are required.

Content

- Short introduction to nonlinear contraction semigroups in Hilbert spaces and to the spaces $H(\text{curl})$ and $H(\text{div})$.
- Semilinear case:
Maxwell's equations with linear material laws and nonlinear conductivity. Wellposedness by means of maximal monotone operators. Long-term behavior.
- Quasilinear case:
Maxwell's equations with nonlinear instantaneous material laws. Local wellposedness on the whole space via linearisation, apriori estimates and regularization. Blow-up examples. Outlook to results on domains.

4	Grade to a tenth	Each winter term	1 term	English	4	1

Mandatory			
T-ETIT-101945	Optical Waveguides and Fibers	4 CR	Koos

Competence Certificate

Type of Examination: Oral exam

Duration of Examination: approx. 20 minutes

Modality of Exam: The written exam is offered continuously upon individual appointment.

Prerequisites

None

Competence Goal

The students

- conceive the basic principles of light-matter-interaction and wave propagation in dielectric media and can explain the origin and the implications of the Lorentz model and of Kramers-Kronig relation,
- are able to quantitatively analyze the dispersive properties of optical media using Sellmeier relations and scientific databases,
- can explain and mathematically describe the working principle of an optical slab waveguide and the formation of guided modes,
- are able to program a mode solver for a slab waveguide in Matlab,
- are familiar with the basic principle of surface plasmon polariton propagation,
- know basic structures of planar integrated waveguides and are able to model special cases with semi-analytical approximations such as the Marcatili method or the effective-index method,
- are familiar with the basic concepts of numerical mode solvers and the associated limitations,
- are familiar with state-of-the-art waveguide technologies in integrated optics and the associated fabrication methods,
- know basic concepts of step-index fibers, graded-index fibers and microstructured fibers,
- are able to derive and solve basic relations for step-index fibers from Maxwell's equations,
- are familiar with the concept of hybrid and linearly polarized fiber modes,
- can mathematically describe signal propagation in single-mode fibers design dispersion-compensated transmission links,
- conceive the physical origin of fiber attenuation effects,
- are familiar with state-of-the-art fiber technologies and the associated fabrication methods,
- can derive models for dielectric waveguide structures using the mode expansion method,
- conceive the principles of directional couplers, multi-mode interference couplers, and waveguide gratings,
- can mathematically describe active waveguides and waveguide bends.

Content

1. Introduction: Optical communications
2. Fundamentals of wave propagation in optics: Maxwell's equations in optical media, wave equation and plane waves, material dispersion, Kramers-Kroig relation and Sellmeier equations, Lorentz and Drude model of refractive index, signal propagation in dispersive media.
3. Slab waveguides: Reflection from a plane dielectric boundary, slab waveguide eigenmodes, radiation modes, inter- and intramodal dispersion, metal-dielectric structures and surface plasmon polariton propagation.
4. Planar integrated waveguides: Basic structures of integrated optical waveguides, guided modes of rectangular waveguides (Marcatili method and effective-index method), basics of numerical methods for mode calculations (finite difference- and finite-element methods), waveguide technologies in integrated optics and associated fabrication methods
5. Optical fibers: Optical fiber basics, step-index fibers (hybrid modes and LP-modes), graded-index fibers (infinitely extended parabolic profile), microstructured fibers and photonic-crystal fibers, fiber technologies and fabrication methods, signal propagation in single-mode fibers, fiber attenuation, dispersion and dispersion compensation
6. Waveguide-based devices: Modeling of dielectric waveguide structures using mode expansion and orthogonality relations, multimode interference couplers and directional couplers, waveguide gratings, material gain and absorption in optical waveguides, bent waveguides

Module grade calculation

The module grade is the grade of the oral exam.

There is, however, a bonus system based on the problem sets that are solved during the tutorials: During the term, 3 problem sets will be collected in the tutorial and graded without prior announcement. If for each of these sets more than 70% of the problems have been solved correctly, a bonus of 0.3 grades will be granted on the final mark of the oral exam.

Workload

Total 120 h, hereof 45 h contact hours (30 h lecture, 15 h tutorial) and 75 h homework and self-studies.

Recommendation

Solid mathematical and physical background, basic knowledge of electrodynamics

T-MATH-105893	Optimization in Banach Spaces	5 CR	Griesmaier, Hettlich

Competence Certificate

The exam takes place in form of an oral examination of approximately 30 minutes.

Prerequisites

none

Competence Goal

The students can transfer properties from finite dimensional optimization problems to infinite dimensional cases. Furthermore, they can apply these results to problems from approximation theory, calculus of variation and optimal control. The students know about the main theorems and their proofs and can explain conclusions with the help of examples.

Content

Basics from Functional Analysis (in particular separation theorems, properties of convex functions and generalized derivatives), duality theory of convex problems, differentiable optimization problems (Lagrange multiplier), sufficient optimality conditions, existence results, applications in approximation theory, calculus of variation, and optimal control theory.

Module grade calculation

The grade of the module is the grade of the oral examination.

Workload

Total workload: 150 hours

Time of attendance: 60 hours

- lecture including course related examinations

Self-study: 90 hours

- enhancement of course content by post-processing the lectures at home
- working on exercises
- enhancement of course content by additional literature and internet research
- preparation of the course related modul-exam

Recommendation

Some basic knowledge of finite dimensional optimization theory and functional analysis is desirable.

2.162 Module: Optimization of Dynamic Systems [M-ETIT-100531]

Responsible: Prof. Dr.-Ing. Sören Hohmann

Organisation: KIT Department of Electrical Engineering and Information Technology

Part of: [Electrical Engineering](#) / [Information Technology](#) ([Electrical Engineering](#) / [Information Technology](#))

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
5	Grade to a tenth	Each winter term	1 term	English	4	1

Mandatory			
T-ETIT-100685	Optimization of Dynamic Systems	5 CR	Hohmann

Competence Certificate

The assessment consists of a written exam (120 min) taking place in the recess period.

Prerequisites

none

Competence Goal

- The students know as well the mathematical basics as the fundamental methods and algorithms to solve constraint and unconstraint nonlinear static optimization problems.
- They can solve constraint and unconstraint dynamic optimization by using the calculus of variations approach and the Dynamic Programming method.
- Also they are able to transfer dynamic optimization problem to static problems.
- The students know the mathematic relations, the pros and cons and the limits of the particular optimization methods.
- They can transfer problems from other fields of their studies in a convenient optimization problem formulation and they are able to select and implement suitable optimization algorithms for them by using common software tools.

Content

The module teaches the mathematical basics that are required to solve optimization problems. The first part of the lecture treats methods for solving static optimization problems. The second part of the lecture focuses on solving dynamic optimization problems by using the method of Euler-Lagrange and the Hamilton method as well as the dynamic programming approach.

Module grade calculation

The module grade is the grade of the written exam.

Workload

Each credit point stands for an amount of work of 30h of the student. The amount of work includes

1. presence in lecture/exercises/tutorial(optional) (2+1 SWS: 45h1.5 LP)
2. preparation/postprocessing of lecture/exercises (90h3 LP)
3. preparation/presence in the written exam (15h0.5 LP)

Mandatory			
T-PHYS-102369	Particle Physics I	8 CR	Ferber, Husemann, Klute, Quast, Rabbertz

Competence Certificate

Oral Exam. In the MSc Physics, this module is examined together with further modules attended as part of the major in physics. The total duration of the oral exam is approx. 60 minutes.

Prerequisites

none

Competence Goal

Students can classify elementary particles and qualitatively analyze interactions between elementary particles using symmetries, Feynman diagrams and Lagrangian densities. Combining this knowledge with knowledge of elementary particle detection, students will be able to discuss the operation of modern particle physics detectors. Students will be able to interpret current data and figures from the scientific literature on particle physics and present the current state of research and important "open questions". Students will be able to apply techniques of statistical data analysis and Monte Carlo simulation to simple particle physics problems and perform basic characterization of silicon track detectors in the laboratory.

Content

Lecture:

- Basic concepts of particle physics
- Detectors and accelerators
- Basics of the Standard Model
- Tests of the electroweak theory
- Flavour physics
- QCD
- Physics at high transverse momenta
- Higgs physics
- Physics of massive neutrinos
- Physics beyond the Standard Model

Practical exercises:

- Current methods of Monte Carlo simulation and data analysis in particle physics.
- Measurements on modern silicon track detectors.

Annotation

For students of the KIT Faculty of Computer Science: The exams in this module have to be registered via admissions from ISS (KIT Faculty of Computer Science). For this, an e-mail with matriculation numbers and name of the desired exam to Beratung-informatik@informatik.kit.edu is sufficient.

Workload

approx. 240 hours consisting of attendance time (60 hours), follow-up of the lecture incl. exam preparation and preparation of the exercises (180 hours)

Recommendation

Basic knowledge of experimental particle physics from the lecture Modern Experimental Physics III in the bachelor's program in physics.

Literature

M. Thomson: Modern Particle Physics, Cambridge University Press (2013). D. Griffith: Introduction to Elementary Particles, Wiley (2008). A. Bettini: Introduction to Elementary Particle Physics, Cambridge University Press (2008). C. Berger: Elementarteilchenphysik, Springer (2006).

Additional references will be given in lecture.

Competence Certificate

The examination is an oral examination with a duration of 30 minutes (section 4 subsection 2 number 2 SPO).

Prerequisites

None

Competence Goal

Understanding of the mechanisms of entropy generation, and the interaction of the first and the second law in thermodynamic cycles; understanding of cryogenic material properties; application, analysis and assessment of real gas models for classical helium I; understanding of quantum fluid properties of helium II based on Bose-Einstein condensation, understanding of cooling principles at lowest temperatures.

Content

Relation between energy and temperature, energy transformation on microscopic and on macroscopic scales, physical definitions of entropy and temperature, thermodynamic equilibria, reversibility of thermodynamic cycles, helium as classical and as quantum fluid, low-temperature material properties, cooling methods at temperatures below 1 K.

Module grade calculation

The grade of the oral examination is the module grade.

Competence Certificate

oral exam

Prerequisites

none

Competence Goal

The students know about important properties of the Poisson process. The focus is on probabilistic methods and results which are independent of the specific phase space. The students understand the central role of the Poisson process as a specific point process and as a random measure.

Content

- Distributional properties of Poisson processes
- The Poisson process as a particular point process
- stationary Poisson and point processes
- Random measures and Cox processes
- Poisson cluster processes and compound Poisson processes
- The spatial Gale-Shapley algorithm

Competence Certificate

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

The grade of the oral examination is the module grade.

Prerequisites

None

Competence Goal

Students are able to sum up and explain equilibrium and kinetic equations relevant for chromatography modeling. They are able to explain the methods used for determination of equilibrium and kinetic parameters and can discuss examples. They are familiar with the principle of complex downstream processes, e.g. simulated moving beds, and can explain the differences to conventional chromatography. Using commercial software they are able to simulate chromatography processes and to analyze the results. On this basis they can optimize process parameters and fit them in order to meet given targets such as purity or yield. They can evaluate different processes and choose the variant for a given task.

Content

Fundamentals and practical examples of chromatography modeling,
Design rules for Simulated Moving Beds, Design of Experiments (DOE)

Mandatory			
T-MATH-112241	Random Graphs and Networks	8 CR	Hug

Competence Certificate

oral exam of ca. 30 min

Prerequisites

none

Content

In the course, models of random graphs and networks are presented and methods will be developed which allow to state and prove results about the structure of such models.

In particular, the following models are treated:

- Erdős--Renyi graphs
- Configuration models
- Preferential-Attachment graphs
- Generalized inhomogeneous random graphs
- Geometric random graphs

and the following methods are addressed:

- Branching processes
- Coupling arguments
- Probabilistic bounds
- Martingales
- Local convergence of random graphs

Module grade calculation

The grade of the module is the grade of the oral exam.

Annotation

can not be completed together with M-MATH-102951 - Random Graphs

Workload

Total workload: 240 hours

Recommendation

The contents of the module 'Probability Theory' are strongly recommended.

Competence Certificate

See partial achievements (Teilleistung)

Prerequisites

See partial achievements (Teilleistung)

Competence Goal

The student is able to apply the presented concepts to simple and realistic tasks from robotics. This includes mastering and deriving the mathematical concepts relevant for robot modeling. Furthermore, the student masters the kinematic and dynamic modeling of robot systems, as well as the modeling and design of simple controllers. The student knows the algorithmic basics of motion and grasp planning and can apply these algorithms to problems in robotics. He/she knows algorithms from the field of image processing and is able to apply them to problems in robotics. He/she is able to model and solve tasks as a symbolic planning problem. The student has knowledge about intuitive programming procedures for robots and knows procedures for programming and learning by demonstration.

Content

The lecture provides an overview of the fundamentals of robotics using the examples of industrial robots, service robots and autonomous humanoid robots. An insight into all relevant topics is given. This includes methods and algorithms for robot modeling, control and motion planning, image processing and robot programming. First, mathematical basics and methods for kinematic and dynamic robot modeling, trajectory planning and control as well as algorithms for collision-free motion planning and grasp planning are covered. Subsequently, basics of image processing, intuitive robot programming especially by human demonstration and symbolic planning are presented.

In the exercise, the theoretical contents of the lecture are further illustrated with examples. Students deepen their knowledge of the methods and algorithms by independently working on problems and discussing them in the exercise. In particular, students can gain practical programming experience with tools and software libraries commonly used in robotics.

Workload

Lecture with 3 SWS + 1 SWS Tutorial, 6 LP
 6 LP corresponds to 180 hours, including
 $15 \cdot 3 = 45$ hours attendance time (lecture)
 $15 \cdot 1 = 15$ hours attendance time (tutorial)
 $15 \cdot 6 = 90$ hours self-study and exercise sheets
 30 hours preparation for the exam

Competence Certificate

See partial achievements (Teilleistung)

Prerequisites

See partial achievements (Teilleistung)

Competence Goal

The student can name the main sensor principles used in robotics.

The student can explain the data flow from physical measurement through digitization to the use of the recorded data for feature extraction, state estimation and semantic scene understanding.

The student is able to propose and justify suitable sensor concepts for common tasks in robotics.

Content

The lecture supplements the lecture Robotics I with a broad overview of sensors used in robotics. The lecture focuses on visual perception, object detection, simultaneous localization and mapping (SLAM) and semantic scene interpretation. The lecture is divided into two parts:

In the first part a comprehensive overview of current sensor technologies is given. A basic distinction is made between sensors for the perception of the environment (exteroceptive) and sensors for the perception of the internal state (proprioceptive).

The second part of the lecture concentrates on the use and interpretation of exteroceptive sensors in robotics. The topics covered include tactile exploration and visual data processing, including advanced topics such as feature extraction, object detection, simultaneous localization and mapping (SLAM) and semantic scene understanding.

Workload

Lecture with 2 SWS, 3 LP

3 LP corresponds to 90 hours, including

15 * 2 = 30 hours attendance time

15 * 2 = 30 hours self-study

30 hours preparation for the exam

Recommendation

Attending the lecture Robotics I – Introduction to Robotics is recommended.

Competence Certificate

The module will be completed with an oral exam (approx. 30 min).

Prerequisites

none

Competence Goal

The main aim of this lecture is to introduce students to tools and techniques developed in recent years to analyze the evolution of fluids and kinetic equations.

The students will learn how to use these techniques and how to apply them to families of equations.

Content

In this lecture we discuss selected techniques and tools that have lead to significant progress in the analysis of fluids and kinetic equations.

These, for instance, include:

- energy methods and local well-posedness results (e.g. fixed point results, Osgood lemma)
- Newton iteration
- Cauchy-Kowalewska and ghost energy approaches

No prior knowledge of fluids or kinetic equations is required.

Module grade calculation

The grade of the module is the grade of the oral exam.

Workload

Total workload: 90 hours

Attendance: 30 h

- lectures and examination

Self studies: 60 h

- follow-up and deepening of the course content,
- literature study and internet research on the course content,
- preparation for the module examination

Recommendation

The modules "Classical Methods for Partial Differential Equations" and "Functional Analysis" are recommended.

M**2.183 Module: Selected Topics in Harmonic Analysis [M-MATH-104435]****Responsible:** Prof. Dr. Dirk Hundertmark**Organisation:** KIT Department of Mathematics**Part of:** [Applied Mathematics \(Analysis\)](#)

T-MATH-109065	Selected Topics in Harmonic Analysis	3 CR	Hundertmark

Prerequisites

None

Competence Goal

The students are familiar with the concepts of singular integral operators and weighted estimates in Harmonic Analysis. They know the relations between the BMO space and the Muckenhoupt weights and also how to use dyadic analysis operators to obtain estimates for Calderon-Zygmund operators.

Content

- Calderon-Zygmund and Singular Integral operators
- BMO space and Muckenhoupt weights
- Reverse Holder Inequality and Factorisation of A_p weights
- Extrapolation Theory and weighted norm inequalities for singular integral operators

Competence Goal

The students are familiar with some basic spatial stochastic processes. They do not only understand how to deal with general properties of distributions, but also know how to describe and apply specific models (Poisson process, Gaussian random fields). They know how to work self-organised and self-reflexive.

Content

- Point processes
- Random measures
- Poisson processes
- Gibbs point processes
- Ralm distributions
- Spatial ergodic theorem
- Spectral Theory of random fields
- Gaussian fields

Recommendation

It is recommended to attend the following modules beforehand: Probability Theory

Competence Certificate

The module will be completed with an oral exam (approx. 30 min).

Prerequisites

none

Competence Goal

The students will

- know the fundamental principles and problems of machine learning and can relate learning methods to these principles,
- be able to explain how certain learning methods work and can apply them,
- be able to develop and to discuss a statistical analysis of certain learning methods,
- be able to understand independently and to apply new learning methods.

Content

1 Regression

1.1 Empirical risk minimization

1.2 Lasso

1.3 Random forests

1.4 Neuronal networks

2 Classification

2.1 Bayes classifier

2.2 Logistic regression

2.3 Discriminant analysis

2.4 k nearest neighbour

2.5 Support vector machines

3 Unsupervised learning

3.1 Principal component analysis

3.2 Generative networks

Module grade calculation

The grade of the module is the grade of the oral exam.

Workload

Total effort: 240 hours

The workload consists of:

- attendance time in lectures (including the exam): 90 hours
- self-study (including preparation and post-processing of lectures, solving of weekly exercises, preparation for the exam): 150 hours

Recommendation

The module "Probability Theory" is strongly recommended. The module "Statistics" (M-MATH-103220) is recommended.

M**2.197 Module: Statistical Thermodynamics [M-CIWVT-103059]****Responsible:** Prof. Dr. Sabine Enders**Organisation:** KIT Department of Chemical and Process Engineering**Part of:** [Chemical and Process Engineering \(Chemical and Process Engineering\)](#)**Credits**

Competence Goal

The students

- know the fundamental geometric models and characteristics in stochastic geometry,
- are familiar with properties of Poisson processes of geometric objects,
- know examples of applications of models of stochastic geometry,
- know how to work self-organised and self-reflexive.

Content

- Random Sets
- Geometric Point Processes
- Stationarity and Isotropy
- Germ Grain Models
- Boolean Models
- Foundations of Integral Geometry
- Geometric densities and characteristics
- Random Tessellations

Recommendation

It is recommended to attend the module 'Spatial Stochastics' beforehand.

Mandatory			
T-MATH-112242	Stochastic Simulation	5 CR	Krumscheid

Competence Certificate

oral exam of ca. 30 min

Prerequisites

None

Competence Goal

After successfully taking part in the module's classes and the exam, students will be acquainted with sampling-based computational tools used to analyze systems with uncertainty arising in engineering, physics, chemistry, and economics. Specifically, by the end of this course, students will be able to analyze the convergence of sampling algorithms and implement the discussed sampling methods for different stochastic processes as computer codes. Understanding the advantages and disadvantages of different sampling-based methods, the students can, in particular, choose appropriate stochastic simulation techniques and propose efficient sampling methods for a specific stochastic problem. In particular, they can name and discuss essential theoretical concepts, and understand the structure of the sampling-based computational methods. Finally, the course prepares students to write a thesis in the field of Uncertainty Quantification.

Content

The course covers mathematical concepts and computational tools used to analyze systems with uncertainty arising across various application domains. First, we will address stochastic modelling strategies to represent uncertainty in such systems. Then we will discuss sampling-based methods to assess uncertain system outputs via stochastic simulation techniques. The focus of this course will be on the theoretical foundations of the discussed techniques, as well as their methodological realization as efficient computational tools. Topics covered include:

- Random variable generation
- Simulation of random processes
- Simulation of Gaussian random fields
- Monte Carlo method; output analysis
- Variance reduction techniques
- Rare event simulations
- Quasi Monte Carlo methods
- Markov Chain Monte Carlo methods (Metropolis-Hasting, Gibbs sampler)

Module grade calculation

The grade of the module is the grade of the oral exam.

Workload

total workload: 150 hours

Recommendation

The contents of the modules 'M-MATH-101321 - Introduction to Stochastics' and 'M-MATH-103214 – Numerical Mathematics 1+2' are recommended.

M

2.204 Module: Structural Graph Theory [M-MATH-105463]

Responsible: Prof. Dr. Maria Aksenovich**Organisation:** KIT Department of Mathematics**Part of:** [Mathematical Specialization \(Elective Field Mathematical Specialization\)](#)
Additional Examinations

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
4	Grade to a tenth	Irregular	1 term	English	4	1

Mandatory			
T-MATH-111004	Structural Graph Theory	4 CR	Aksenovich

Prerequisites

None

Competence Goal

After successful completion of the course, the participants should be able to present and analyse main results in Structural Graph Theory. They should be able to establish connections between graph minors and other graph parameters, give examples, and apply fundamental results to related problems.

Content

The purpose of this course is to provide an introduction to some of the central results and methods of structural graph theory. Our main point of emphasis will be on graph minor theory and the concepts devised in Robertson and Seymour's intricate proof of the Graph Minor Theorem: in every infinite set of graphs there are two graphs such that one is a minor of the other.

Our second point of emphasis (time permitting) will be on Hadwiger's conjecture: that every graph with chromatic number at least r has a K_r minor. We shall survey what is known about this conjecture, including some very recent progress.

Recommendation

A solid background in the fundamentals of graph theory.

M**2.205 Module: Supplementary Studies on Culture and Society [M-ZAK-106235]**

Responsible: Dr. Christine Mielke
Christine Myglas

Organisation:

Part of: Additional Examinations

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
22	Grade to a tenth	Each term	3 terms	German	4	1

Election notes

With the exception of the final oral exam and the practice module, students have to self-record the achievements obtained in the Supplementary Studies on Culture and Society in their study plan. ZAK records the achievements as "non-assigned" under "ÜQ/SQ-Leistungen". Further instructions on self-recording of achievements can be found in the FAQ at <https://campus.studium.kit.edu/> and on the ZAK homepage at <https://www.zak.kit.edu/begleitstudium-bak.php>. The title of the examination and the amount of credits override the modules placeholders.

If you want to use ZAK achievements **both for your interdisciplinary qualifications and for the supplementary studies**, please record them in the interdisciplinary qualifications first. You can then get in contact with the ZAK study services (stg@zak.kit.edu) to also record them in your supplementary studies.

In the in-depth module, achievements have to be obtained in three different areas. The areas are as follows:

- Technology & Responsibility
- Doing Culture
- Media & Aesthetics
- Spheres of Life
- Global Cultures

You have to obtain two achievements with 3 credits each and one achievement with 5 credits. To self-record achievements in the in-depth module, you first have to elect the matching partial achievement.

Note: If you registered for the Supplementary Studies on Sustainable Development before April 1st, 2023, self-recording an achievement in this module counts as a request in the sense of §20 (2) of the regulations for the Supplementary Studies on Culture and Society. Your overall grade for the supplementary studies will thus be calculated as the average of the examination grades, not as the average of the module grades.

Mandatory

Mandatory			
T-ZAK-112660	Practice Module	4 CR	Mielke, Myglas
T-ZAK-112659	Oral Exam - Supplementary Studies on Culture and Society	4 CR	Mielke, Myglas

Competence Certificate

The monitoring is explained in the respective partial achievement.

They are composed of:

- minutes
- presentations
- a seminar paper
- an internship report
- an oral examination

After successful completion of the supplementary studies, the graduates receive a graded certificate and a KIT certificate.

Prerequisites

The offer is study-accompanying and does not have to be completed within a defined period of time. Enrolment or acceptance for graduation must be present when registering for the final examination.

KIT students register for the supplementary studies by selecting this module in the student portal and self-checking a performance. In addition, registration for the individual courses is necessary, which is possible shortly before the beginning of each semester.

The course catalogue, statutes (study regulations), registration form for the oral exam, and guides for preparing the various written performance requirements can be found as downloads on the ZAK homepage at www.zak.kit.edu/begleitstudium-bak.

Competence Goal

Graduates of the Supplementary Studies on Culture and Society demonstrate a sound basic knowledge of conditions, procedures and concepts for analysing and shaping fundamental social development tasks in connection with cultural topics. They have gained a well-founded theoretical and practical insight into various cultural studies and interdisciplinary topics in the field of tension between culture, technology and society in the sense of an expanded concept of culture.

They are able to place the contents selected from the specialization module in the basic context as well as to analyse and evaluate the contents of the selected courses independently and exemplarily and to communicate about them scientifically in written and oral form. Graduates are able to analyse social topics and problem areas and critically reflect on them in a socially responsible and sustainable perspective.

Content

The Supplementary Studies on Culture and Society can be started from the 1st semester and is not limited in time. It comprises at least 3 semesters. The supplementary studies are divided into 3 modules (basics, in-depth studies, practice). A total of 22 credit points (ECTS) are earned.

The thematic elective areas of the supplementary studies are divided into the following 5 modules and their sub-topics:

Block 1 Technology & Responsibility

Value change / ethics of responsibility, technology development / history of technology, general ecology, sustainability

Block 2 Doing Culture

Cultural studies, cultural management, creative industries, cultural institutions, cultural policy

Block 3 Media & Aesthetics

Media communication, cultural aesthetics

Block 4 Spheres of Life

Cultural sociology, cultural heritage, architecture and urban planning, industrial science

Block 5 Global Cultures

Multiculturalism / interculturalism / transculturalism, science and culture

Module grade calculation

The overall grade of the supplementary studies is calculated as an average of the grades of the examination performances weighted with credit points.

In-depth Module

- presentation 1 (3 ECTS)
- presentation 2 (3 ECTS)
- seminar paper incl. presentation (5 ECTS)
- oral examination (4 ECTS)

Annotation

With the Supplementary Studies on Culture and Society, KIT provides a multidisciplinary study offer as an additional qualification, with which the respective specialized study program is supplemented by interdisciplinary basic knowledge and interdisciplinary orientation knowledge in the field of cultural studies, which is becoming increasingly important for all professions.

Within the framework of the supplementary studies, students acquire in-depth knowledge of various cultural studies and interdisciplinary subject areas in the field of tension between culture, technology and society. In addition to high culture in the classical sense, other cultural practices, common values and norms as well as historical perspectives of cultural developments and influences are considered.

In the courses, conditions, procedures and concepts for the analysis and design of fundamental social development tasks are acquired on the basis of an expanded concept of culture. This includes everything created by humans - also opinions, ideas, religious or other beliefs. The aim is to develop a modern concept of cultural diversity. This includes the cultural dimension of education, science and communication as well as the preservation of cultural heritage. (UNESCO, 1982)

According to § 16 of the statutes, a reference and a certificate are issued by the ZAK for the supplementary studies. The achievements are also shown in the transcript of records of the degree program and, upon request, in the certificate. They can also be recognized in the interdisciplinary qualifications (see elective information).

Workload

The workload is made up of the recommended number of hours for the individual modules:

- basic module approx. 90 h
- in-depth module approx. 340 h
- practical module approx. 120 h

total: approx. 550 h

Learning type

- lectures
- seminars
- workshops
- practical course

Literature

Recommended reading of primary and specialized literature will be determined individually by each instructor.

T-ZAK-112346	Specialisation Module - Self Assignment BeNe	6 CR	Myglas
T-ZAK-112351	Oral Exam - Supplementary Studies on Sustainable Development	4 CR	

Competence Certificate

The monitoring is explained in the respective partial achievement .

They are composed of:

- protocols
- a reflection report
- presentations
- presentations
- the elaboration of a project work
- an individual term paper

Upon successful completion of the supplementary studies, graduates receive a graded report and a certificate issued by ZAK.

Prerequisites

The course is offered during the course of study and does not have to be completed within a defined period of time. Enrolment is required for all performance assessments of the modules of the supplementary studies. Participation in the supplementary studies is regulated by § 3 of the statutes.

KIT students register for the supplementary studies by selecting this module in the student portal and self-booking a performance. Registration for courses, performance assessments and examinations is regulated by § 6 of the Statutes and is usually possible shortly before the beginning of the semester.

The course catalogue, statutes (study regulations), registration form for the oral exam and guidelines for preparing the various written performance requirements can be found as downloads on the ZAK homepage at <http://www.zak.kit.edu/begleitstudium-bene>.

Competence Goal

Graduates of the supplementary studies in sustainable development acquire additional practical and professional competencies. Thus, the supplementary study program enables the acquisition of basics and initial experience in project management, trains teamwork skills, presentation skills and self-reflection, and also creates a fundamental understanding of sustainability that is relevant for all professional fields.

Graduates are able to analyse social topics and problem areas and critically reflect on them in a socially responsible and sustainable perspective. They are able to place the contents selected from the modules "Elective" and "Advanced" in the basic context as well as to independently and exemplarily analyse and evaluate the contents of the selected courses and to scientifically communicate about them in written and oral form.

Content

The supplementary study program Sustainable Development can be started from the 1st semester and is not limited in time. The wide range of courses offered by ZAK makes it possible to complete the program usually within three semesters. The supplementary studies comprise 19 credit points (LP). It consists of three modules: Basic Module, Elective Module and Advanced Module.

The thematic elective areas of the supplementary studies are divided into the following 4 modules and their subtopics in Module 2 (elective module):

Block 1 **Sustainable Cities and Neighbourhoods**

The courses provide an overview of the interaction of social, ecological, and economic dynamics in the microcosm of the city.

Block 2 **Sustainability Assessment of Technology**

Mostly based on ongoing research activities, methods and approaches of technology assessment are elaborated.

Block 3 **Subject, Body, Individual: The other Side of Sustainability**

Different approaches are presented to the individual perception, experience, shaping and responsibility of relationships to the environment and to oneself.

Block 4 **Sustainability in Culture, Economy & Society**

Courses usually have an interdisciplinary approach, but may also focus on one of the areas of culture, economics or society, both in application and in theory.

The core of the supplementary studies is a case study in the specialization area. In this project seminar, students conduct sustainability research with practical relevance themselves. The case study is supplemented by an oral examination with two topics from module 2 (elective module) and module 3 (in-depth module).

Module grade calculation

The overall grade of the supplementary studies is calculated as an average of the grades of the examination performances weighted with credit points.

Elective module

- Presentation 1 (3 ECTS)
- Presentation 2 (3 ECTS)

Advanced module

- individual term paper (6 ECTS)
- oral examination (4 ECTS)

Annotation

The Supplementary Studies on Sustainable Development at KIT is based on the conviction that a long-term socially and ecologically compatible coexistence in the global world is only possible if knowledge about necessary changes in science, economy and society is acquired and applied.

The interdisciplinary and transdisciplinary Studies on Sustainable Development enables diverse access to transformation knowledge as well as basic principles and application areas of sustainable development. According to the statutes § 16, a certificate is issued by the ZAK for the complementary studies.

The achievements are also shown in the transcript of records of the degree program and, upon request, in the certificate. They can also be recognized in the interdisciplinary qualifications (see elective information).

In the specialised studies, modules and partial achievements can be recognised within the framework of the additional achievements or e.g. the interdisciplinary qualifications. This must be regulated via the respective subject study programme.

The focus is on experience- and application-oriented knowledge and competences, but theories and methods are also learned. The aim is to be able to represent one's own actions as a student, researcher and later decision-maker as well as an individual and part of society under the aspect of sustainability.

Sustainability is understood as a guiding principle to which economic, scientific, social and individual actions should be oriented. According to this, the long-term and socially just use of natural resources and the material environment for a positive development of global society can only be addressed by means of integrative concepts. Therefore, "education for sustainable development" in the sense of the United Nations programme plays just as central a role as the goal of promoting "cultures of sustainability". For this purpose, practice-centred and research-based learning of sustainability is made possible and the broad concept of culture established at ZAK is used, which understands culture as habitual behaviour, lifestyle and changing context for social actions.

The supplementary study programme conveys the basics of project management, trains teamwork skills, presentation skills and self-reflection. Complementary to the specialised studies at KIT, it creates a fundamental understanding of sustainability, which is important for all professional fields. Integrative concepts and methods are essential: in order to use natural resources in the long term and to shape the global future in a socially just way, not only different disciplines, but also citizens, practitioners and institutions must work together.

Workload

The workload is made up of the number of hours of the individual modules:

- Basic module approx. 180 h
- Elective module approx. 150 h
- Consolidation module approx. 180 h

Total: approx. 510 h

Learning type

- lectures
- seminars
- workshops

Literature

Recommended reading of primary and specialist literature is determined individually by the respective lecturer.

Competence Certificate

Oral Exam. In the MSc Physics, this module is examined together with further modules attended as part of the major in physics. The total duration of the oral exam is approx. 60 minutes.

Prerequisites

none

Competence Goal

The properties of light at the nanoscale can be controlled by various means. The aim of this lecture is to familiarize the students with the different possibilities that rely on nanostructured dielectric or metallic materials and to outline on solid mathematical grounds the analytical description of observable effects. The lecture is meant as a complementary source of education to experimental lecture. It shall provide the students with the necessary skills to work themselves in the field of theoretical nanooptics.

Content

- Dispersion relation to describe light in extended systems such as free space, interfaces, planar waveguides and waveguides with complicated geometrical cross sections.
- Description of the interaction of light with isolated objects such as spheres, cylinders, ellipsoids and prolates and oblates.
- Properties of plasmonic nanoparticles and the ability to tune their properties
- Notion of optical antennas and the discussion of their basic characteristics
- Description of the dynamics of wave propagation by perturbed eigenstates, i.e. coupled mode theory. Application to optical waveguide arrays.
- Discussion of metamaterials (unit cells, homogenization, light propagation, applications)
- Transformation optics
- Analytical modeling and phenomenological tools to describe nanooptical systems

Workload

180 hours composed of active time (45), wrap-up of the lecture incl. preparation of the examination and the exercises (135)

Recommendation

Solid mathematical background, good knowledge of classical electromagnetism and theoretical optics.

Literature

- L. Novotny and B. Hecht, Principle of Nano-Optics, Cambridge
- S. A. Maier, Plasmonics, Springer
- J. D. Joannopoulos, S. G. Johnson, J. N. Winn and R. D. Meade, Photonic Crystals: Molding the Flow of Light, University Press

M

2.211 Module: Theoretical Optics [M-PHYS-102277]

Responsible: Dr. Boris Narozhnyy
Prof. Dr. Carsten Rockstuhl

Organisation: KIT Department of Physics

Part of: **Experimental Physics (Experimental Physics)**

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
6	Grade to a tenth	Each summer term	1 term	English	4	1

Mandatory			
T-PHYS-104578	Theoretical Optics	6 CR	Narozhnyy, Rockstuhl

Competence Certificate

Oral Exam. In the MSc Physics, this module is examined together with further modules attended as part of the major in physics. The total duration of the oral exam is approx. 60 minutes.

Prerequisites

none

Competence Goal

The students deepen their knowledge about the theory and the mathematical tools in optics and photonics. They learn how to apply these tools to describe fundamental phenomena and how to predict observable quantities that reflect the actual physics from the theory by way of a corresponding purposeful mathematical analyses. They learn how to solve problems of both, interpretative and predictive nature with regards to model systems and real life situations.

Content

- Review of Electromagnetism (Maxwell's Equations, Stress Tensor, Material Properties, Kramers-Kronig Relation, Wave Propagation, Poynting's Theorem)
- Diffraction Theory (The Principles of Huygens and Fresnel, Scalar Diffraction Theory: Green's Function, Helmholtz-Kirchhoff Theorem, Kirchhoff Formulation of Diffraction, Fresnel-Kirchhoff Diffraction Formula, Rayleigh-Sommerfeld Formulation of Diffraction, Angular Spectrum Method, Fresnel and Fraunhofer Diffraction, Method of Stationary Phases, Basics of Holography)
- Crystal Optics (Polarization, Anisotropic Media, Fresnel Equation, Applications)
- Classical Coherence Theory (Elementary Coherence Phenomena, Theory of Stochastic Processes, Correlation Functions)
- Quantum Optics and Quantum Optical Coherence Theory (Review of Quantum Mechanics, Quantization of the EM Field, Quantum Coherence Functions)

Annotation

For students of the KIT Faculty of Computer Science: The exams in this module have to be registered via admissions from ISS (KIT Faculty of Computer Science). For this, an e-mail with matriculation numbers and name of the desired exam to Beratung-informatik@informatik.kit.edu is sufficient.

Workload

180 hours composed of active time (45 hours), wrap-up of the lecture incl. preparation of the examination (135 hours)

Recommendation

Solid mathematical background, good knowledge of classical electromagnetism and basic knowledge of quantum mechanics.

Literature

- "Classical Electrodynamics" John David Jackson

Competence Certificate

The examination is a written examination with a duration of 90 minutes (section 4 subsection 2 number 1 SPO).

The grade of the written examination is the module grade.

Prerequisites

None

Competence Goal

Students are familiar with the basic principles for the description of complex, multicomponent mixtures and thermodynamic equilibria including equilibria with chemical reactions. They are able to select suitable models and to calculate the properties of multicomponent real systems.

Content

Phase- and reaction equilibria of real systems, equations of state for real mixtures, models for activity coefficients, polymer solutions, protein solutions, electrolyte solutions.

Workload

- Attendance time (Lecture): 60 h
- Homework: 90 h
- Exam Preparation: 30 h

T-MATH-105897	Traveling Waves	6 CR	de Rijk, Reichel

Competence Certificate

The module examination takes place in form of an oral exam of about 30 minutes. Please see under "Modulnote" for more information about the bonus regulation.

Prerequisites

none

Competence Goal

After successful completion of this module students:

- can explain the significance of traveling waves and their dynamic stability;
- know basic methods to study the existence of traveling waves;
- outline the main steps in a stability analysis and address potential complications;
- have acquired several mathematical tools to compute or approximate the spectrum;
- master several techniques to derive (in)stability of the wave from spectral information;
- understand how spectrum and stability might depend on the class of perturbations.

Content

Traveling waves are solutions to nonlinear partial differential equations (PDEs) that propagate over time with a fixed speed without changing their profiles. These special solutions arise in many applied problems where they model, for instance, water waves, nerve impulses in axons or light in optical fibers. Therefore, their existence and the naturally associated question of their dynamic stability is of interest, because only those waves which are stable can be observed in practice.

The first step in the stability analysis is to linearize the underlying PDE about the wave and compute the associated spectrum, which is in general a nontrivial task. To approximate spectra associated with various waves, such as fronts, pulses and periodic wave trains, we introduce the following tools:

- Sturm-Liouville theory
- exponential dichotomies
- Fredholm theory
- the Evans function
- parity arguments
- essential spectrum, point spectrum and absolute spectrum
- exponential weights

The next step is to derive useful bounds on the linear solution operator, or semigroup, based on the spectral information. A complicating factor is that any non-constant traveling wave possesses spectrum up to the imaginary axis. For various dissipative PDEs, such as reaction-diffusion systems, we employ the bounds on the linear solution operator to close a nonlinear argument via iterative estimates on the Duhamel formula. For traveling waves in Hamiltonian PDEs, such as the NLS or KdV equation, we describe a different route towards stability based on the variational arguments of Grillakis, Shatah and Strauss.

Module grade calculation

After passing the oral exam at the end of the semester, the final grade is $\min(0.7X + 0.3Y, X)$, where X is the grade for the oral exam and Y is the grade obtained by voluntarily working out and presenting a model problem during one of the exercise classes.

Recommendation

The following background is strongly recommended: Analysis 1-4.

Kapitula, Todd; Promislow, Keith. Spectral and dynamical stability of nonlinear waves. Applied Mathematical Sciences, 185. Springer, New York, 2013.

2.220 Module: Uncertainty Quantification [M-MATH-104054]

Responsible: Prof. Dr. Martin Frank

Organisation: KIT Department of Mathematics

Part of: [Applied Mathematics \(Elective Field Applied Mathematics\)](#)
[Mathematical Specialization \(Elective Field Mathematical Specialization\)](#)
[Additional Examinations](#)

Credits	Grading scale	Recurrence	Duration	Level	Version
4	Grade to a tenth	Each summer term	1 term	4	1

Mandatory			
T-MATH-108399	Uncertainty Quantification	4 CR	Frank

Prerequisites

None

Competence Goal

After successfully taking part in the module's classes and exams, students have gained knowledge and abilities as described in the "Inhalt" section.

Specifically, students know several parametrization methods for uncertainties. Furthermore, students are able to describe the basics of several solution methods (stochastic collocation, stochastic Galerkin, Monte-Carlo). Students can explain the so-called curse of dimensionality.

Students are able to apply numerical methods to solve engineering problems formulated as algebraic or differential equations with uncertainties. They can name the advantages and disadvantages of each method. Students can judge whether specific methods are applicable to the specific problem and discuss their results with specialists and colleagues. Finally, students are able to implement the above methods in computer codes.

Content

In this class, we learn to propagate uncertain input parameters through differential equation models, a field called Uncertainty Quantification (UQ). Given uncertain input (parameter values, initial or boundary conditions), how uncertain is the output? The first part of the course ("how to do it") gives an overview on techniques that are used. Among these are:

- Sensitivity analysis
- Monte-Carlo methods
- Spectral expansions
- Stochastic Galerkin method
- Collocation methods, sparse grids

The second part of the course ("why to do it like this") deals with the theoretical foundations of these methods. The so-called "curse of dimensionality" leads us to questions from approximation theory. We look back at the very standard numerical algorithms of interpolation and quadrature, and ask how they perform in many dimensions.

Recommendation

Numerical methods for differential equations

M**2.221 Module: Unit Operations and Process Chains for Food of Animal Origin [M-CIWVT-104421]**

Responsible: Prof. Dr.-Ing. Heike Karbstein
Organisation: KIT Department of Chemical and Process Engineering
Part of: **Chemical and Process Engineering (Chemical and Process Engineering)**

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
5	Grade to a tenth	Each summer term	1 term	German	4	3

Mandatory			
T-CIWVT-108996	Unit Operations and Process Chains for Food of Animal Origin	5 CR	Karbstein

Competence Certificate

Learning control is an oral examination with a duration about of 30 minutes.

Prerequisites

None

Competence Goal

Students understand and are able to explain conventional methods for producing foods, even complex ones, from animals. They know process chains and unit operations of relevance, both conventional and innovative approaches. They are able to design the processes according to raw material specifics. They identify correlations between process parameters and quality-determining properties of food. They are also able to transfer process knowledge between individual product groups. They know essential aspects required to assess sustainability and energy aspects of the individual process steps and complete process chains.

Students are able to apply principles of product design. This involves identifying the relationships between process parameters and the structure of a food product (process function) as well as between the inner structure of foods and their properties (property function). Based on this, they are able to analyze and solve problems in the field of food process engineering.

Students are able to use their knowledge to evaluate a process unit with regard to food production, involving aspects such as sustainability, energy efficiency, food safety or expected product quality.

Content

Lecture: Milk and dairy products, meat and meat products, sausages, functional foods: Process chains and unit operations

Basics of process design, process energy and raw material related specifics, innovative processes; relevant parameters for keeping food safety and quality.

Module grade calculation

Grade of the module is the grade of oral examination.

Christine Myglas

Organisation:

Part of: [M-ZAK-106235 - Supplementary Studies on Culture and Society](#)

Type	Credits	Grading scale	Version
Completed coursework	3	pass/fail	1

Competence Certificate

The monitoring in this module includes a course credit according to § 5 section 4 in the form of minutes of which two are to be handed in freely chosen topics of the lecture series " Introduction to Applied Studies on Culture and Society ". Length: approx. 6,000 characters each (incl. spaces).

Self service assignment of supplementary studies

This course can be used for self service assignment of grade acquired from the following study providers:

- Zentrum für Angewandte Kulturwissenschaft und Studium Generale
- ZAK Begleitstudium

Recommendation

Fjordevik, Anneli und Jörg Roche: Angewandte Kulturwissenschaften. Vol. 10. Narr Francke Attempto Verlag, 2019.

Annotation

The Basic Module consists of the lecture "Introduction to Supplementary Studies on Culture and Society", which is offered only in the winter semester. It is therefore recommended that students start their studies in the winter semester and complete them before module 2.

3.17 Course: Basics Module - Self Assignment BeNe [T-ZAK-112345]

Organisation:

Part of: [M-ZAK-106099 - Supplementary Studies on Sustainable Development](#)

Type	Credits	Grading scale	Version
Completed coursework	3	pass/fail	1

Competence Certificate

The monitoring in this module includes a course credit according to § 5 section 4:

[Introduction to Sustainable Development](#) in the form of minutes of which two are to be handed in freely chosen topics of the lecture series "Introduction to Sustainable Development". Length: approx. 6,000 characters each (incl. spaces).

or

[Sustainability Spring Days at KIT](#) in the form of a reflection report on all components of the project days "Sustainability Spring Days at KIT". Length approx. 12,000 characters (incl. spaces).

Prerequisites

None

Self service assignment of supplementary studies

This course can be used for self service assignment of grade acquired from the following study providers:

- Zentrum für Angewandte Kulturwissenschaft und Studium Generale
- ZAK Begleitstudium

Recommendation

Kropp, Ariane: Grundlagen der Nachhaltigen Entwicklung: Handlungsmöglichkeiten und Strategien zur Umsetzung. Springer-Verlag, 2018.

Pufé, Iris: Nachhaltigkeit. 3. überarb. Edition, UTB, 2017.

Roorda, Niko, et al.: Grundlagen der nachhaltigen Entwicklung. Springer-Verlag, 2021.

Annotation

Module Basics consists of the lecture "Introduction to Sustainable Development", which is only offered in the summer semester or alternatively of the project days "Sustainability Spring Days at KIT", which is only offered in the winter semester. It is recommended to complete the course before Elective Module and Specialisation Module.

In exceptional cases, Elective Module or Specialisation Module can also be completed simultaneously with Basics Module. However, the prior completion of the advanced modules Elective and Specialisation should be avoided.

V

Batteries and Fuel Cells

2304207, WS 22/23, 2 SWS, Language: German, [Open in study portal](#)

Lecture (V)
Blended (On-Site/Online)

Content

The lecture provides a practical insight into the current application areas and research topics of fuel cells and batteries. It deals with the design and functionality of electrochemical energy conversion and storage devices and provides knowledge about materials, cell designs, measurement methods, data analysis and modelling. The lecture and most slides are in German.

Fuzzy Sets

24611, SS 2023, 3 SWS, Language: German, [Open in study portal](#)

Lecture (V)
On-Site

Content

In this module, the fundamental theory and practical applications of fuzzy sets are communicated. The course copes with fuzzy arithmetics, fuzzy logic, fuzzy relations, and fuzzy deduction. The representation of fuzzy sets and their properties are the theoretical foundation. Based on this theory, arithmetic and logical operations are axiomatically derived and analyzed. Furthermore, it is shown how arbitrary functions and relations are transferred into fuzzy sets. An application of the logic part of the module, fuzzy deduction, shows different approaches to applying rule-based systems on fuzzy sets. The final part of the course treats the problem of fuzzy control.

Competence Certificate

At least two presentations must be given: An examination of another kind according to § 5 section 3 (3) in the form of a presentation in one of the chosen courses (3 ECT).

In a third seminar, either (a) a presentation is held (preliminary study achievement) which remains not graded and a topic-related term paper is submitted or (b) a written exam is taken.

The three courses can be selected individually from the 5 thematic blocks or – in exceptional cases and according to the agreement with the responsible lecturer – all three courses can be selected from one block in the sense of a specialization. In addition, an oral examination is taken, which relates to the content of two of the chosen three courses.

Prerequisites

Prerequisite for the 'Oral Examination' is the successful completion of Modules 1 and 3 and the required elective sections in Module 2.

Self service assignment of supplementary studies

This course can be used for self service assignment of grade acquired from the following study providers:

- Zentrum für Angewandte Kulturwissenschaft und Studium Generale
- ZAK Begleitstudium

Annotation

The content of the Basic Modul is helpful.

V

Introduction to Kinetic Theory0155450, WS 22/23, 2 SWS, Language: English, [Open in study portal](#)**Lecture (V)**
Blended (On-Site/Online)**Content**

Kinetic descriptions play an important role in a variety of physical, biological, and even social applications, for instance, in the description of gases, radiations, bacteria or financial markets. Typically, these systems are described locally not by a finite set of variables but instead by a probability density describing the distribution of a microscopic state. Its evolution is typically given by an integro-differential equation. Unfortunately, the large phase space associated with the kinetic description has made simulations impractical in most settings in the past. However, recent advances in computer resources, reduced-order modeling and numerical algorithms are making accurate approximations of kinetic models more tractable, and this trend is expected to continue in the future. On the theoretical mathematical side, two rather recent Fields medals (Pierre-Louis Lions 1994, Cédric Villani 2010) also indicate the continuing interest in this field, which was already the subject of Hilbert's sixth out of the 23 problems presented at the World Congress of Mathematicians in 1900.

This course gives an introduction to kinetic theory. Our purpose is to discuss the mathematical passage from a microscopic description of a system of particles, via a probabilistic description to a macroscopic view. This is done in a complete way for the linear case of particles that are interacting with a background medium. The nonlinear case of pairwise interacting particles is treated on a more phenomenological level.

An extremely broad range of mathematical techniques is used in this course. Besides mathematical modeling, we make use of statistics and probability theory, ordinary differential equations, hyperbolic partial differential equations, integral equations (and thus functional analysis) and infinite-dimensional optimization. Among the astonishing discoveries of kinetic theory are the statistical interpretation of the Second Law of Thermodynamics, induced by the Boltzmann-Grad limit, and the result that the macroscopic equations describing fluid motion (namely the Euler and Navier-Stokes equations) can be inferred from abstract geometrical properties of integral scattering operators.

Organizational issues

The course will be offered in flipped classroom format in the second half of the semester.

Coursework will start on December 15, but there will be a first meeting on October 27.

Flipped classroom means that the lectures will be made available as videos. We will regularly meet for tutorials and discussion sessions.

V

Localization of Mobile Agents

24613, SS 2023, 3 SWS, Language: German, [Open in study portal](#)

Lecture (V)
On-Site

Content

This module provides a systematic introduction into the topic of localization methods. In order to facilitate understanding, the module is divided into four main topics. Dead reckoning treats the instantaneous determination of a vehicle's position based on dynamic parameters like velocity or steering angle. Localization with the help of measurements of known landmarks is part of static localization. In addition to the closed-form solutions for particular measurements (distances and angles), the least squares method for fusion arbitrary measurements is also introduced. Dynamic localization treats the combination of dead reckoning and static localization. The central part of the lecture is the derivation of the Kalman filter, which has been successfully applied in several practical applications. Finally, simultaneous localization and mapping (SLAM) is introduced, which allows localization in case of (partly) unknown landmark positions.

Modeled Conditions

The following conditions have to be fulfilled:

1. The course [T-INFO-101352 - Robotics III - Sensors in Robotics](#) must not have been started.

Recommendation

Attending the lecture Robotics I – Introduction to Robotics is recommended.

Below you will find excerpts from events related to this course:

V

Robotics III - Sensors and Perception in Robotics2400067, SS 2023, 2 SWS, Language: German/English, [Open in study portal](#)**Lecture (V)
On-Site****Content**

The lecture supplements the lecture Robotics I with a broad overview of sensors used in robotics. The lecture focuses on visual perception, object recognition, simultaneous localization and mapping (SLAM) and semantic scene interpretation. The lecture is divided into two parts:

In the first part a comprehensive overview of current sensor technologies is given. A basic distinction is made between sensors for the perception of the environment (exteroceptive) and sensors for the perception of the internal state (proprioceptive).

The second part of the lecture concentrates on the use of exteroceptive sensors in robotics. The topics covered include tactile exploration and visual data processing, including advanced topics such as feature extraction, object localization, simultaneous localization and mapping (SLAM) and semantic scene interpretation.

Learning Objectives:

Students know the main sensor principles used in robotics and understand the data flow from physical measurement through digitization to the use of the recorded data for feature extraction, state estimation and environmental modeling.

Students are able to propose and justify suitable sensor concepts for common tasks in robotics.

Organizational issues

Die Erfolgskontrolle erfolgt in Form einer schriftlichen Prüfung im Umfang von i.d.R. 60 Minuten nach § 4 Abs. 2 Nr. 1 SPO.

Modul für Master Maschinenbau, Mechatronik und Informationstechnik, Elektrotechnik und Informationstechnik

Empfehlungen: **Der Besuch der Vorlesung Robotik I – Einführung in die Robotik wird empfohlen**

Zielgruppe: Die Vorlesung richtet sich an Studierende der Informatik, der Elektrotechnik und des Maschinenbaus sowie an alle Interessenten an der Robotik.

Arbeitsaufwand: 90 h

Literature

Eine Foliensammlung wird im Laufe der Vorlesung angeboten.

Begleitende Literatur wird zu den einzelnen Themen in der Vorlesung bekannt gegeben.

Content

In order to handle complex dynamic systems (e.g., in robotics), an in-step estimation of the system's internal state (e.g., position and orientation of the actuator) is required. Such an estimation is ideally based on the system model (e.g., a discretized differential equation describing the system dynamics) and the measurement model (e.g., a nonlinear function that maps the state space to a measurement subspace). Both system and measurement model are uncertain (e.g., include additive or multiplicative noise).

For continuous state spaces, an exact calculation of the probability densities is only possible in a few special cases. In practice, general nonlinear systems are often traced back to these special cases by simplifying assumptions. One extreme is linearization with subsequent application of linear estimation theory. However, this often leads to unsatisfactory results and requires additional heuristic measures. At the other extreme are numerical approximation methods, which only evaluate the desired distribution densities at discrete points in the state space. Although the working principle of these procedures is usually quite simple, a practical implementation often turns out to be difficult and especially for higher-dimensional systems it is computationally complex.

As a middle ground, analytical nonlinear estimation methods would therefore often be desirable. In this lecture the main difficulties in the development of such estimation methods are presented and corresponding solution modules are presented. Based on these building blocks, some analytical estimation methods are discussed in detail as examples, which are very suitable for practical implementation and offer a good compromise between computing effort and performance. Useful applications of these estimation methods are also discussed. Both known methods and the results of current research are presented.

24128, WS 22/23, 3 SWS, Language: German, [Open in study portal](#)

Lecture (V)
On-Site

Content

The lecture covers (i.a.) protocols, architectures, as well as methods and algorithms, for routing and establishing reliable end-to-end connections in the Internet. In addition to various methods for media access control in local area networks, the lecture also covers other communication systems, e.g. circuit-switched systems such as ISDN. Participants should also have understood the possibilities for managing and administering networks.

Familiarity with the contents of the lecture *Einführung in Rechnernetze* or comparable lectures is assumed.

Learning Objectives

After attending this lecture, the students will

- have a profound understanding of protocols, architectures, as well as procedures and algorithms used for routing and for establishing reliable end-to-end connections in the Internet
- have a profound understanding of different media access control procedures in local networks and other communication systems like circuit-switched ISDN
- have a profound understanding of the problems that arise in large scale dynamic communication systems and are familiar with mechanism to deal with these problems
- be familiar with current developments such as SDN and data center networking
- be familiar with different aspects and possibilities for network management and administration

Students have a profound understanding of the basic protocol mechanisms that are necessary to establish reliable end-to-end communication. Students have detailed knowledge about the congestion and flow control mechanisms used in TCP and can discuss fairness issue in the context of multiple parallel transport streams. Students can analytically determine the performance of transport protocols and know techniques for dealing with specific constraints in the context of TCP, e.g., high data rates and low latencies. Students are familiar with current topics such as the problem of middle boxes on the Internet, the usage of TCP in data centers or multipath TCP. Students are also familiar with practical aspects of modern transport protocols and know practical ways to overcome heterogeneity in the development of distributed applications.

Students know the functions of (Internet) routing and routers and can explain and apply common routing algorithms. Students are familiar with routing architectures and different alternatives for buffer placement as well as their advantages and disadvantages. Students understand the classification into interior and exterior gateway protocols and have in-depth knowledge of the functionality and features of common protocols such as RIP, OSPF, and BGP. Students are also familiar with current topics such as label switching, IPv6 and SDN.

Students know the function of media access control and are able to classify and analytically evaluate different media access control mechanisms. Students have an in-depth knowledge of Ethernet and various Ethernet variants and characteristics, which especially includes current developments such as real-time Ethernet and data center Ethernet. Students can explain and apply the Spanning Tree Protocol.

Students know the architecture of ISDN and can reproduce the peculiarities of setting up the ISDN subscriber line. Students are familiar with the technical features of DSL.

Uncertainty Quantification

0164400, SS 2023, 2 SWS, Language: English, [Open in study portal](#)

Lecture (V)

Content

"There are known knowns; there are things we know we know. We also know there are known unknowns; that is to say we know there are some things we do not know. But there are also unknown unknowns – there are things we do not know we don't know." (Donald Rumsfeld)

In this class, we learn to deal with the known unknowns, a field called Uncertainty Quantification (UQ). We particularly focus on the propagation of uncertainties (e.g. unknown data, unknown initial or boundary conditions) through models (mostly differential equations) and leave other important questions of UQ (especially inference) aside. Given uncertain input, how uncertain is the output? The uncertainties are modeled as random variables, and thus the solutions of the equations become random variables themselves.

Thus we summarize the necessary foundations of probability theory, with a focus on modeling correlated and uncorrelated random vectors. Furthermore, we will see that every uncertain parameter becomes a dimension in the problem. We are thus quickly led to high-dimensional problems. Standard numerical methods suffer from the so-called curse of dimensionality, i.e. to reach a certain accuracy one needs excessively many model evaluations. Thus we study the fundamentals of approximation theory.

The first part of the course ("how to do it") gives an overview on techniques that are used. Among these are:

- Sensitivity analysis
- Monte-Carlo methods
- Spectral expansions
- Stochastic Galerkin method
- Collocation methods, sparse grids

The second part of the course ("why to do it like this") deals with the theoretical foundations of these methods. The so-called "curse of dimensionality" leads us to questions from approximation theory. We look back at the very standard numerical algorithms of interpolation and quadrature, and ask how they perform in many dimensions.

Organizational issues

The course will be offered in flipped classroom format. This means that the lectures will be made available as videos; students will also have lecture notes. We meet in presence for the tutorials, and there will also be office hours. First meeting on April 21 at 15:45.
